XX PT Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX PS Disclosure; SEQ ID NO 45; 84bp; English.
XX CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

XX

XX
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
XX where each strand of (I) has 19-23 nucleotides, and does not require the
XX presence of nucleotides having a 2-hydroxy group for mediating RNA
XX interference. (I) is useful for treating diseases e.g., asthma, allergic
XX rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
XX vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
XX Alzheimer's disease or urinary incontinence. (II) has increased resistance
XX towards nucleases. Double stranded short interfering nucleic acid molecule
XX was produced by solid phase oligonucleotide synthesis method. This
XX sequence represents an example of a siRNA molecule of the invention.

PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
XX Disclosure; SEQ ID NO 57; 84bp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siRNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

Disclosure; SEQ ID NO 17; 84bp; English.

The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference, where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides having a 2-hydroxy group for mediating RNA interference. (I) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoconstriction or hypertension, emphysema, irritable bowel syndrome, Alzheimer's disease or urinary incontinence. (I) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule

PT acid molecule that directs cleavage of Cholinergic receptor muscarinic 3
XX RNA through RNA interference, useful for treating asthma.
XX PS Disclosure; SEQ ID NO 151; 84bp; English.
XX
XX CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siNA molecule of the invention.

 XX XX
 XX Novel chemically synthesized double stranded short interfering nucleic
 XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 XX RNA through RNA interference, useful for treating asthma.
 XX PS Disclosure; SEQ ID NO 11; 84pp; English.
 XX XX
 XX The invention relates to a chemically synthesized double stranded short
 XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 XX where each strand of (I) has 19-23 nucleotides, and does not require the
 XX presence of nucleotides having a 2-hydroxy group for mediating RNA
 XX interference. (I) is useful for treating diseases e.g., asthma, allergic
 XX rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 XX vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 XX Alzheimer's disease or urinary incontinence. (I) has increased resistance
 XX towards nuclease. Double stranded short interfering nucleic acid molecule
 XX was produced by solid phase oligonucleotide synthesis method. This
 XX sequence represents an example of a siRNA molecule of the invention.

 XX
 XX Novel chemically synthesized double stranded short interfering nucleic
 PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 PT RNA through RNA interference, useful for treating asthma.
 XX
 PS Disclosure; SEQ ID NO 86; 84pp; English.
 CC
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

 PT RNA through RNA interference, useful for treating asthma.
 XX
 PS Disclosure; SEQ ID NO 16; 84pp; English.
 XX
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

DR Novel chemically synthesized double stranded short interfering nucleic
XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
XX Disclosure; SEQ ID NO 63; 84pp; English.
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary

CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nucleases. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

DR Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
XX Disclosure; SEQ ID NO 125; 84pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

PT RNA through RNA interference, useful for treating asthma.
XX
XX
PS Disclosure; SEQ ID NO 7; 84pp; English.
XX

CC The invention relates to a chemically synthesized double stranded short
interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nucleases. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

 DR Novel chemically synthesized double stranded short interfering nucleic
 XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 PT RNA through RNA interference, useful for treating asthma.
 PS Disclosure; SEQ ID NO 176; 84pp; English.
 XX The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

 PT Novel chemically synthesized double stranded short interfering nucleic
 PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 PT RNA through RNA interference, useful for treating asthma.
 XX
 PS Disclosure; SEQ ID NO 44; 84bp; English.
 XX
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

XX Novel chemically synthesized double stranded short interfering nucleic
XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
XX RNA through RNA interference, useful for treating asthma.
XX
XX
XX Disclosure; SEQ ID NO 121; 84pp; English.
XX
XX
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
XX where each strand of (I) has 19-23 nucleotides, and does not require the
XX presence of nucleotides having a 2-hydroxy group for mediating RNA
XX interference. (I) is useful for treating diseases e.g., asthma, allergic
XX rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
XX vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
XX Alzheimer's disease or urinary incontinence. (I) has increased resistance
XX towards nuclease. Double stranded short interfering nucleic acid molecule
XX CC was produced by solid phase oligonucleotide synthesis method. This
XX sequence represents an example of a siRNA molecule of the invention.

PT Novel chemically synthesized double stranded short interfering nucleic

PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3

PT RNA through RNA interference, useful for treating asthma.

XX

PS Disclosure; SEQ ID NO 152; 84pp; English.

XX

CC The invention relates to a chemically synthesized double stranded short

CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a

CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,

CC where each strand of (I) has 19-23 nucleotides, and does not require the

CC presence of nucleotides having a 2-hydroxy group for mediating RNA

CC interference. (I) is useful for treating diseases e.g., asthma, allergic

CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary

CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,

CC Alzheimer's disease or urinary incontinence. (I) has increased resistance

CC towards nuclease. Double stranded short interfering nucleic acid molecule

CC was produced by solid phase oligonucleotide synthesis method. This

CC sequence represents an example of a siRNA molecule of the invention.

XX Novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholineergic receptor muscarinic 3 RNA through RNA interference, useful for treating asthma.

PT

PS Disclosure; SEQ ID NO 73; 84pp; English.

CC The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference, where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides having a 2-hydroxy group for mediating RNA interference. (I) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoconstriction or hypertension, emphysema, irritable bowel syndrome, Alzheimer's disease or urinary incontinence. (I) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule was produced by solid phase oligonucleotide synthesis method. This sequence represents an example of a siRNA molecule of the invention.

 XX
 XX Novel chemically synthesized double stranded short interfering nucleic
 PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 PT RNA through RNA interference, useful for treating asthma.
 XX
 PS Disclosure; SEQ ID NO 101; 84pp; English.
 XX
 XX The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

DR Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
PS Disclosure; SEQ ID NO 49; 84pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

 PT Novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 PT RNA through RNA interference, useful for treating asthma.
 PS Disclosure; SEQ ID NO 65; 84pp; English.
 XX
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

XX Richards I, Macswigen J;

XX WPI; 2005-356237/36.

XX New short interfering nucleic acid molecule that directs cleavage of a

XX cholinergic receptor muscarinic 3 RNA, useful for treating or preventing

XX respiratory and pulmonary diseases, e.g. chronic obstructive pulmonary

XX disease.

XX Claim 33; SEQ ID NO 207; 184pp; English.

XX The invention relates to a chemically synthesized double stranded short

XX interfering nucleic acid (siNA) molecule that directs cleavage of a

XX cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference

XX (RNAi). The siNA molecule, compounds, compositions, and methods are

XX useful for treating or preventing respiratory and pulmonary diseases,

XX asthma, allergic rhinitis, sinusitis, inflammation, allergies,

XX disease, and/or conditions, including chronic obstructive pulmonary

XX disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,

XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
CC (RNAi). The siNA molecule, compounds, compositions, and methods are
CC useful for treating or preventing respiratory and pulmonary diseases,
CC disorder, and/or conditions, including chronic obstructive pulmonary
CC disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
CC cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
CC present sequence represents a cholinergic receptor muscarinic 3 siRNA.

XX New short interfering nucleic acid molecule that directs cleavage of a
PT cholinergic receptor muscarinic 3 RNA, useful for treating or preventing
PT respiratory and pulmonary diseases, e.g. chronic obstructive pulmonary
PT disease.
XX
XX Claim 33; SEQ ID NO 253; 184bp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
CC (RNAi). The siNA molecule, compounds, compositions, and methods are
CC useful for treating or preventing respiratory and pulmonary diseases,
CC disorders, and/or conditions, including chronic obstructive pulmonary
CC disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
CC cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
CC present sequence represents a cholinergic receptor muscarinic 3 siRNA.

 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siRNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2'-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

PT Novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
PS Disclosure; SEQ ID NO 207; 84pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siRNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference, where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides having a 2-hydroxy group for mediating RNA interference. (I) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoconstriction or hypertension, emphysema, irritable bowel syndrome, Alzheimer's disease or urinary incontinence. (I) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule CC was produced by solid phase oligonucleotide synthesis method. This CC sequence represents an example of a siRNA molecule of the invention.

PT Novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholinergic receptor muscarinic 3 RNA through RNA interference, useful for treating asthma.
XX
PS Disclosure; SEQ ID NO 205; 84bp; English.

CC	The invention relates to a chemically synthesized double stranded short
CC	interfering nucleic acid (siNA) molecule (1) that directs cleavage of a
CC	cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC	where each strand of (1) has 19-23 nucleotides, and does not require the
CC	presence of nucleotides having a 2-hydroxy group for mediating RNA
CC	interference. (1) is useful for treating diseases e.g., asthma, allergic
CC	rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC	vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC	Alzheimer's disease or urinary incontinence. (1) has increased resistance
CC	towards nuclease. Double stranded short interfering nucleic acid molecule
CC	was produced by solid phase oligonucleotide synthesis method. This
CC	sequence represents an example of the invention.

 XX
 XX Isolated nucleic acid molecules having polymorphisms in known human genes
 PT e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers
 PT for locating, identifying and characterizing the genes responsible for
 PT disorder-related traits.
 PS Example 28; Page 159; 714pp; English.
 XX
 XX This invention relates to the sequence of an isolated nucleic acid
 CC molecule comprising at least one base variation from that of a known
 CC human cytochrome P450 A1 (CYP450A1), cytochrome P450 A2 (CYP450A2),
 CC cyclochole P450 02E1 (CYP45002E1), adrenergic receptor beta1 (ADBR1),
 CC aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
 CC (ARNT), cathepsin S (CTSS), cyclooxygenase 2 (COX2), diazepam binding
 CC inhibitor (DBI), epoxide hydrolase 2 (EPHX2), 5-lipoxygenase activating
 CC protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
 CC transferase (HMMT), (kallikrein 2) KLR2, nicotinamide -N-methyl
 CC sulfoxidoreductase thermolabile (STM), UDP-glucuronosyl transferase 2B4
 CC (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
 CC transferase (UGT2B15), urokinase receptor (UPA), multidrug resistance 1
 CC (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
 CC (MRP3), orphan nuclear receptor (NR112), or acetylcholine muscarinic
 CC receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
 CC The polymorphisms in the human genes cited in the invention are useful as
 CC genetic linkage markers for locating and characterising the genes that
 CC are responsible for specific traits within the genome and eventually
 CC identifying the genes responsible for a variety of disorder-related
 CC traits as a result of their e.g. overexpression, constitutive
 CC expression, mutation or underexpression, which may be used in diagnosing
 CC and/or treating the disorders. The nucleic acid molecules comprising the
 CC polymorphic sequences contained in CYP450A1, CYP450A2, CYP4502E1,
 CC ARNT, EPHX2, GST12, NNMT, NQO2, NR112, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
 CC MDR1 and/or MDR3 are useful for screening individuals for altered drug
 CC metabolism. The polymorphic sequences contained in CYP450A1, CYP450A2,
 CC AHR, MDR1 and/or MDR3 may also be used to screen individuals for
 CC susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
 CC used to screen for altered cardiovascular function. In COX2 for altered
 CC susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
 CC nervous system function, in FLAP and HMMT for altered pulmonary,
 CC immunological or haematological function, in KLR2 for altered serine
 CC protease activity in the prostate, in LTF for altered immunological or
 CC haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
 CC peripheral nervous system function. The present sequence represents a
 CC polymorphic DNA sequence of the invention

PT Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.

PS Disclosure; SEQ ID NO 225; 84pp; English.

The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference, where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides having a 2-hydroxy group for mediating RNA interference. (I) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoconstriction or hypertension, emphysema, irritable bowel syndrome, Alzheimer's disease or urinary incontinence. (I) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule was produced by solid phase oligonucleotide synthesis method. This sequence represents an example of a siNA molecule of the invention.

CC	interfering nucleic acid (siNA) molecule that directs cleavage of a
CC	cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
CC	(RNAi). The siNA molecule, compounds, compositions, and methods are
CC	useful for treating or preventing respiratory and pulmonary diseases,
CC	disorders, and/or conditions, including chronic obstructive pulmonary
CC	disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
CC	cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
CC	present sequence represents a cholinergic receptor muscarinic 3 siRNA.

PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
PS Disclosure; SEQ ID NO 251; 84pp; English.
XX
XX
CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

XX
XX Novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholinergic receptor muscarinic 3 RNA through RNA interference, useful for treating asthma.
PT
XX
XX Disclosure; SEQ ID NO 279; 84bp; English.
XX
XX The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference, where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides having a 2-hydroxy group for mediating RNA interference. (I) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoconstriction or hypertension, emphysema, irritable bowel syndrome, Alzheimer's disease or urinary incontinence. (I) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule was produced by solid phase oligonucleotide synthesis method. This sequence represents an example of a siRNA molecule of the invention.

PT Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
PS Disclosure; SEQ ID NO 219; 84pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

XX
XX
XX Isolated nucleic acid molecules having polymorphisms in known human genes
XX e.g. cytochrome P450 and catepsin S useful as genetic linkage markers
XX for locating, identifying and characterizing the genes responsible for
XX disorder-related traits.
XX
XX
XX Example 28; Page 159; 714pp; English.
XX
XX This invention relates to the sequence of an isolated nucleic acid
XX molecule comprising at least one base variation from that of a known
XX human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2),
XX cytochrome P450 02B1 (CYP45002B1), adrenergic receptor beta1 (ADBR1),
XX aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
XX (ARNT), catepsin S (CTSS), cyclooxygenase 2 (COX2), diazepam binding
XX inhibitor (DBI), epoxide hydrolase 2 (EPHX2), 5-lipoxygenase activating
XX protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
XX transferase (HNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl
XX transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2),
XX sulfoltransferase thermostable (STM), UDP-glucuronosyl transferase 2B4
XX (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
XX transferase (UGT2B15), uridine kinase receptor (URK), multidrug resistance 1
XX (MDR1), lactoferrin (LTF), multidrug resistance associated protein 3
XX (MRP3), orphan nuclear receptor (NR112), or acetylcholine muscarinic
XX receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
XX The polymorphisms in the human genes cited in the invention are useful as
XX genetic linkage markers for locating and characterizing the genes that
XX are responsible for specific traits within the genome and eventually
XX identifying the genes responsible for a variety of disorder-related
XX traits as a result of their e.g., overexpression, constitutive
XX expression, mutation or underexpression, which may be used in diagnosing
XX and/or treating the disorders. The nucleic acid molecules comprising the
XX polymorphic sequences contained in CYP4501A1, CYP4501A2, CYP4502B1,
XX ARNT, EPHX2, GST12, NNMT, NQO2, NR112, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
XX MDR1 and/or MRP3 are useful for screening individuals for altered drug
XX metabolism. The polymorphic sequences contained in CYP4501A1, CYP4501A2,
XX AHR, MRP1 and/or MRP3 may also be used to screen individuals for
XX susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
XX used to screen for altered cardiovascular function. In COX2 for altered
XX susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
XX nervous system function, in FLAP and HNMT for altered pulmonary,
XX immunological or haematological function, in KLK2 for altered serine
XX protease activity in the prostate, in LTF for altered immunological or
XX haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
XX peripheral nervous system function. The present sequence represents a
XX polymorphic DNA sequence of the invention

XX
XX Novel polymorphic variant of reference sequence for human cholinergic
XX receptor, muscarinic 3 gene, useful for diagnostic and therapeutic
XX purposes.
XX
XX Example 1; Page 29; 54pp; English.
XX
XX The patent relates to polymorphic variants of human cholinergic receptor,
XX muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
XX single nucleotide polymorphism selected from cytosine at PS1, adenine at
XX PS2 or PS3, and cytosine at PS4. The invention also relates to a method
XX for genotyping and haplotyping the CHRM3 gene for identification of
XX variants. The polymorphic variant is useful for therapeutic purposes, for
XX studying the expression and biological function of CHRM3, as well as for
XX developing drugs targeting the CHRM3 protein. The variant is also useful
XX in diagnostics and forensic applications. The recombinant nonhuman
XX organism transfected with the polymorphic variant is useful for studying
XX expression of CHRM3 isogenes in vivo, for in vivo screening and testing
XX of drugs targeted against CHRM3 protein, and for testing the efficacy of
XX therapeutic agents and compounds for Alzheimer's disease, Sjogren's
XX syndrome, disorders associated with smooth muscle contractility and
XX sudden infant death syndrome. The CHRM3 protein variant is useful in drug
XX screening assays and its antibodies are useful in immunoassays to detect
XX CHRM3 protein variants in biological samples. The present sequence is a
XX PCR primer used for amplifying a fragment of human CHRM3 gene for
XX detecting polymorphic sites

XX PT New nucleic acid segments of the human genome, particularly from genes
XX PT including polymorphic sites, for phenotype correlation, forensics,
XX PT paternity testing, medicine and genetic analysis.
XX PS Claim 1; Page 68; 80pp; English.
XX CC DNA sequences AAH62100 - AAH62688 represent segments of human genes which
XX CC contain single nucleotide polymorphisms (SNPs). A method is included in
XX CC the invention for analysing a nucleic acid sample, which consists of
XX CC determining the base occupying any one of the polymorphic sites given in
XX CC the SNP containing sequences. The nucleotide sequences can be used in the
XX CC diagnosis or monitoring of diseases, such as cancer, inflammation, heart
XX CC diseases, diseases of the cardiovascular system, and infection by
XX CC microorganisms. The oligonucleotides are also useful in the manufacture
XX CC of a medicament for the treatment or prophylaxis of the diseases, and as
XX CC a pharmaceutical. SNP containing oligonucleotides are useful in
XX CC applications such as phenotype correlation, forensics, paternity testing,
XX CC medicine and genetic analysis

XX Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholineergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
XX Disclosure; SEQ ID NO 204; 84pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholineergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This

CC sequence represents an example of a siRNA molecule of the invention.

XX Novel chemically synthesized double stranded short interfering nucleic
XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
XX RNA through RNA interference, useful for treating asthma.
XX Disclosure; SEQ ID NO 206; 84bp; English.
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
XX where each strand of (I) has 19-23 nucleotides, and does not require the
XX presence of nucleotides having a 2-hydroxy group for mediating RNA
XX interference. (I) is useful for treating diseases e.g., asthma, allergic
XX rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
XX vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
XX Alzheimer's disease or urinary incontinence. (I) has increased resistance
XX towards nuclease. Double stranded short interfering nucleic acid molecule
XX was produced by solid phase oligonucleotide synthesis method. This
XX sequence represents an example of a siRNA molecule of the invention.

PT	receptor, muscarinic 3 gene, useful for diagnostic and therapeutic
PT	purposes.
XX	
PS	Example 1; Page 29; 54pp; English.
XX	
CC	The patent relates to polymorphic variants of human cholinergic receptor,
CC	muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
CC	single nucleotide polymorphism selected from cytosine at PS1, adenine at
CC	PS2 or PS3, and cytosine at PS4. The invention also relates to a method
CC	for genotyping and haplotyping the CHRM3 gene for identification of
CC	variants. The polymorphic variant is useful for therapeutic purposes, for
CC	studying the expression and biological function of CHRM3, as well as for
CC	developing drugs targeting the CHRM3 protein. The variant is also useful
CC	in diagnostics and forensic applications. The recombinant nonhuman
CC	organism transfected with the polymorphic variant is useful for studying
CC	expression of CHRM3 isoforms in vivo, for in vivo screening and testing of
CC	drugs targeted against CHRM3 protein, and for testing the efficacy of
CC	therapeutic agents and compounds for Alzheimer's disease, Sjogren's
CC	sndrome, disorders associated with smooth muscle contractility and
CC	sudden infant death syndrome. The CHRM3 protein variant is useful in drug
CC	screening assays and its antibodies are useful in immunoassays to detect
CC	CHRM3 protein variants in biological samples. The present sequence is a
CC	PCR primer used for amplifying a fragment of human CHRM3 gene for
CC	detecting polymorphic sites

XX Nucleic acid molecules from the human genome which include polymorphic
PT sites, useful in methods for predicting the presence, absence or severity
PT of a particular phenotype or disorder (e.g. diabetes) associated with a
PT particular genotype.
XX
XX Claim 1; Page 98; 145pp; English.
XX
XX The invention relates to the identification of nucleic acid molecules
CC (AA129513-AA131314) from the human genome which include polymorphic sites
CC which can predispose individuals to disease. Various genes from a number
CC of individuals were resequenced and single nucleotide polymorphisms
CC (SNPs) in these genes discovered. The method is useful for predicting the
CC presence, absence or severity of a particular phenotype or disorder (e.g.
CC diabetes) associated with a particular genotype. The nucleic acids
CC containing the polymorphic sites may be useful in forensics and paternity
CC testing

XX
XX Novel polymorphic variant of reference sequence for human cholinergic
PT receptor, muscarinic 3 gene, useful for diagnostic and therapeutic
PT purposes.
XX
XX Example 1; Page 29; 54pp; English.
XX
XX The patent relates to polymorphic variants of human cholinergic receptor,
CC muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
CC single nucleotide polymorphism selected from cytosine at PS1, adenine at
CC PS2 or PS3, and cytosine at PS4. The invention also relates to a method
CC for genotyping and haployping the CHRM3 gene for identification of
CC variants. The polymorphic variant is useful for therapeutic purposes, for
CC studying the expression and biological function of CHRM3, as well as for
CC developing drugs targeting the CHRM3 protein. The variant is also useful
CC in diagnostics and forensic applications. The recombinant nonhuman
CC organism transfected with the polymorphic variant is useful for studying
CC expression of CHRM3 isogenes in vivo, for in vivo screening and testing
CC of drugs targeted against CHRM3 protein, and for testing the efficacy of
CC therapeutic agents and compounds for Alzheimer's disease, Sjogren's
CC syndrome, disorders associated with smooth muscle contractility and
CC sudden infant death syndrome. The CHRM3 protein variant is useful in drug
CC screening assays and its antibodies are useful in immunoassays to detect
CC CHRM3 protein variants in biological samples. The present sequence is a
CC PCR primer used for amplifying a fragment of human CHRM3 gene for
CC detecting polymorphic sites

PT      New G protein-coupled receptors with a mutation in an intracellular
PT      domain, useful for high throughput screening assays for e.g. drugs,
PT      insecticides or nematocides.
XX
PS      Example 2; Page 12; 37pp; English.
XX
CC      This is the DNA sequence of a primer that was used in the PCR
CC      amplification of a DNA fragment consisting of the C-terminal coding
CC      portion of Drosophila melanogaster muscarinic acetylcholine receptor
CC      (MAR) from a Pml site in the 6th transmembrane domain. MAR is a G
CC      protein coupled receptor (GPCR). The PCR product was ligated into
CC      expression plasmid p426GPD. Yeast cells containing an intracellular loop
CC      3 (IC3) deleted Drosophila MAR produced an agonist-dependent growth
CC      response. The invention provides modified GPCRs having a mutation in IC3
CC      that results in an improved functional response in cell-based assays. The
CC      modification promotes growth stimulation by a GPCR agonist, especially by
CC      improving coupling between the receptor and a heterotrimeric G protein.
CC      Polynucleotides encoding the mutated GPCR, chimeric GPCR, vectors and
CC      host cells are also claimed. The modified GPCRs can be used in improved
CC      high throughput screening assays (especially in yeast cells) for
CC      therapeutic drugs, insecticides, nematocides etc. Agonists of G protein-
CC      coupled insect MARs possess substantial insecticide and miticide activity

PT      Nucleic acid molecules from the human genome which include polymorphic
PT      sites, useful in methods for predicting the presence, absence or severity
PT      of a particular phenotype or disorder (e.g. diabetes) associated with a
PT      particular genotype.
XX
PS      Claim 1; Page 11; 145pp; English.
XX
CC      The invention relates to the identification of nucleic acid molecules
CC      (AAI29513-AAI31314) from the human genome which include polymorphic sites
CC      which can predispose individuals to disease. Various genes from a number
CC      of individuals were resequenced and single nucleotide polymorphisms
CC      (SNPs) in these genes discovered. The method is useful for predicting the
CC      presence, absence or severity of a particular phenotype or disorder (e.g.
CC      diabetes) associated with a particular genotype. The nucleic acids
CC      containing the polymorphic sites may be useful in forensics and paternity
CC      testing

XX PT Novel host cells comprising heterologous G protein-coupled receptor

XX PT modified to be constitutively active, useful for high throughput

XX PT screening assays for e.g. drugs, insecticides or nematocides.

XX PS Example 1; Page 20; 75pp; English.

CC This primer sequence, which includes a 5' PmlI site, was used in the PCR
 CC amplification of a C-terminal coding fragment of rat M3 muscarinic
 CC acetylcholine receptor (MAR). MAR is a G protein coupled receptor (GPCR).
 CC The PCR product was ligated into yeast expression plasmid p426GP.
 CC Comparison of the expression of wild-type MAR and intracellular loop 3
 CC (IC3) deleted MAR showed that deletion of a portion of the IC3 produced a
 CC functional GPCR in yeast. Modification of internal domains was therefore
 CC suggested to be a generalizable method for improving the function of
 CC heterologous GPCRs expressed in yeast. The invention relates to mutant
 CC GPCRs with constitutively activating mutations that permit the detection
 CC of the receptors' functional activity in the absence of activating
 CC ligands, host cells that contain mutations that promote the functional
 CC activity of the GPCRs, host cells expressing such receptors, and vectors
 CC useful for making such cells. The host cells are useful in high
 CC throughput screening assays for therapeutic drugs, insecticides,

CC nematocides etc., and are especially useful for assays using orphan
 CC receptors

PT Identifying agonists of G protein-coupled receptors (GPCRs) for use in

PT disease treatment, comprises contacting candidate compounds with versions

PT of GPCRs.

XX Example 2; Page 52; 394pp; English.

XX The invention relates to G protein-coupled receptors (GPCRs) for which

CC the endogenous ligand has been identified. Non-endogenous constitutively

CC activated versions of known GPCRs are used in the invention for the

CC direct identification of candidate compounds as receptor agonists,

CC inverse agonists or partial agonists. Such agonists are useful as

CC therapeutic agents for diseases or disorders associated with GPCRs. The

CC present sequence is a primer used to prepare a non-endogenous version of

CC a known GPCR in an example illustrating the invention

Post-processing: Minimum Match 0%

Maximum Match 100%

Listing first 910 summaries

Database : rng.subdb:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 PT Detecting and/or differentiating prostate cell proliferative disorders in
 PT a subject by contacting genomic with reagent(s) that distinguishes
 PT between methylated and non-methylated CpG dinucleotides in target nucleic
 PT acids.
 XX
 PS Example 3; SEQ ID NO 693; 164pp; English.
 XX
 CC The invention describes a method of detecting and/or differentiating
 CC between prostate cell proliferative disorders in a subject comprising
 CC contacting genomic DNA isolated from a biological sample with at least
 CC one reagent, or series of reagents that distinguishes between methylated
 CC and non-methylated CpG dinucleotides within one or a combination of
 CC target nucleic acids e.g. HISTONE H4. Also described are: a treated
 CC nucleic acid derived from SEQ ID NO: 1-59, 1017-1028, 1116, 1171, where
 CC the treatment converts at least one unmethylated cytosine base of the
 CC genomic DNA sequence to uracil or another base that is detectable
 CC dissimilar to cytosine in terms of hybridization; a nucleic acid
 CC comprising at least 16 contiguous nucleotides of a treated genomic DNA
 CC sequence selected from SEQ ID NO: 60-295, 1029-1076, 1117-1120, 1172-1175
 CC and sequences complementary to them; an oligomer comprising a sequence of
 CC at least 9 contiguous nucleotides that is complementary to, or hybridizes
 CC under moderately stringent or stringent conditions to a treated genomic
 CC DNA sequence above; a set of oligomers comprising at least two
 CC oligonucleotides as above; and a kit useful for detecting and/or
 CC distinguishing between or among prostate cell proliferative disorder of a
 CC subject comprising at least one of a bisulfite reagent, or a methylation-
 CC sensitive restriction enzyme, and at least one nucleic acid molecule or
 CC peptide nucleic acid molecule comprising a contiguous sequence at least 9
 CC nucleotides that is complementary to, or hybridizes under moderately
 CC stringent or stringent conditions to a sequence selected from SEQ ID NO:
 CC 60-295, 1029-1076, 1117-1120, 1172-1175 and their complements. The
 CC method, nucleic acid, oligomer, set of oligonucleotide, and kit are
 CC useful for detecting and/or differentiating between or among cell
 CC proliferative disorders. This sequence represents a primer used in the
 CC isolation of gene encoding a prostate cell proliferation associated
 CC protein.

 PT Classifying breast cancers according to estrogen receptor status by
 PT obtaining a genomic DNA sample from a subject and determining the
 PT methylation status of CpG positions within a target nucleic acid.
 XX
 PS Example 1; SEQ ID NO 630; 412pp; English.
 XX
 CC The invention relates to classifying breast cancers according to estrogen
 CC receptor status comprising obtaining a genomic DNA sample from a subject,
 CC determining the methylation status of one or more CpG positions comprised
 CC within at least one target nucleic acid (comprising the gene IGFBP7
 CC and/or its regulatory regions) and determining the estrogen receptor
 CC status of the subject. The method also comprises obtaining a genomic DNA
 CC sample from a subject, determining the methylation status of one or more
 CC CpG positions comprised within at least one target nucleic acid
 CC consisting of one or a combination of the genes or genomic sequences
 CC consisting of IGFBP7, S100A2, ARHI, CSRG2, DAPK1, SFN, PTGS2, IGF1, SEQ
 CC ID NO: 12, ARL7, PLAU, MEF, S100A7, PABP3, SEQ ID NO: 19, SCGB3A1,
 CC SERPINE5, GSTP1, SEQ ID NO: 24, LIM DOMAIN KINASE 1, I16, SEQ ID NO: 27,
 CC ERA4, SEQ ID NO: 29, SFN, SEQ ID NO: 30, SLIT2, CCND2, HOXA5, APAF1, MGCI0561,
 CC PRDM2, PROSTAGLANDIN E2 RECEPTOR, SNGF, NR2E1, SFN, PRSS8 (appearing as
 CC AEF08705-AEF08745) and/or their regulatory regions by contacting the
 CC target nucleic acid with one or more agents (e.g. bisulfite) that convert
 CC cytosine bases that are unmethylated at the 5'-position to a base that is
 CC detectably dissimilar to cytosine in terms of hybridization properties,
 CC and determining the estrogen receptor status of the subject. The method
 CC is useful for classifying breast cancers according to estrogen receptor
 CC status, nodal status or progesterone receptor status. The present
 CC sequence is a probe that detects a region of a target DNA that containing
 CC an unmethylated CpG dinucleotide (i.e. the sequence has been converted to
 CC Tpg).

XX
XX New oligomeric compound for the modulation of survivin, useful for
XX treating e.g. cancers, atherosclerosis, psoriasis, diabetic retinopathy,
XX rheumatoid arthritis, asthma, warts, or allergic dermatitis.
XX
XX Example 10; SEQ ID NO 272; 264pp; English.
XX
XX The invention relates to antisense oligonucleotides consisting of 8-50
XX nucleotides and/or nucleotide analogs which inhibit expression of human
XX survivin, an inhibitor of apoptosis which is also essential for cell
XX division and angiogenesis. The antisense oligonucleotides comprise a
XX subsequence of 8 or more nucleotides or nucleotide analogs, wherein the
XX subsequence is located within a sequence selected from ADM09444-ADM09586.
XX The oligonucleotides preferably contain one or more (preferably 6-10)
XX nucleotide analogs, especially a locked nucleic acid (LNA), and also
XX preferably contain a linkage group selected from a phosphate group, a
XX phosphorothioate group or a boranophosphate group. The invention also
XX relates to a conjugate comprising a survivin antisense oligonucleotide of
XX the invention and one or more non-nucleotide or non-polynucleotide
XX moieties covalently attached to the oligonucleotide, and a pharmaceutical
XX composition comprising a survivin antisense oligonucleotide or conjugate
XX of the invention, optionally further comprising a chemotherapeutic agent.
XX The survivin antisense oligonucleotides, and conjugates and compositions
XX containing them, are useful in the treatment of cancers such as
XX carcinomas (e.g., malignant melanoma, basal cell carcinoma, ovarian
XX carcinoma, breast carcinoma, non-small cell lung cancer, renal cell
XX carcinoma, bladder carcinoma, recurrent superficial bladder cancer,
XX stomach carcinoma, prostatic carcinoma, pancreatic carcinoma, lung
XX carcinoma, cervical carcinoma, cervical dysplasia, laryngeal
XX papillomatosis, colon carcinoma, colorectal carcinoma and carcinoma
XX tumors) (e.g., osteosarcoma, Ewing's sarcoma, chondrosarcoma,
XX malignant fibrous histiocytoma, fibrosarcoma, and Kaposi's sarcoma); or
XX gliomas. The survivin antisense oligonucleotides are also useful in the
XX treatment of conditions such as atherosclerosis, psoriasis, diabetic
XX retinopathy, rheumatoid arthritis, asthma, warts, and allergic
XX dermatitis. They may additionally be used for inhibiting cellular
XX proliferation, for modulating apoptosis and for treating a disease
XX related to abnormal angiogenesis. The survivin antisense oligonucleotides
XX of the invention are shorter than prior art survivin antisense
XX oligonucleotides (16-mers compared to 20-25-mers), therefore having
XX increased specificity and affinity for survivin mRNA, and also have

CC higher biostability and cell permeability. The present sequence
CC represents an antisense oligonucleotide targeted to the human survivin
CC cDNA target sequence shown in ADM09443 used in an example of the
CC invention.

XX
XX Method for modulating pathways leading to programmed cell death for
XX treating cancer, by obtaining peptide having specific amino acid sequence
XX and regulating JNK pathway using peptide or composition developed using
XX peptide sequence.
XX
XX Example 14; SEQ ID NO 41; 110pp; English.
XX
XX The invention relates to methods and compositions for modulating pathways
XX leading to programmed cell death or apoptosis. The method involves
XX selecting a target within the c-Jun-N-terminal kinase (JNK) pathway and
XX interfering the target by an agent that either upregulates or
XX downregulates the JNK pathway. The JNK modulator is effective in treating
XX degenerative disease and cancer. The method and compositions of the
XX invention are useful in immunotherapy, cancer chemotherapy and in gene
XX therapy. The present sequence is the mouse gadd45 DNA fragment. Gadd45 is
XX a modulator of JNK pathway.

XX
XX New oligomeric compound for the modulation of survivin, useful for
XX treating e.g. cancers, atherosclerosis, psoriasis, diabetic retinopathy,
XX rheumatoid arthritis, asthma, warts, or allergic dermatitis.
XX
XX Claim 1; SEQ ID NO 33; 264pp; English.
XX
XX The invention relates to antisense oligonucleotides consisting of 8-50
XX nucleotides and/or nucleotide analogs which inhibit expression of human
XX survivin, an inhibitor of apoptosis which is also essential for cell
XX division and angiogenesis. The antisense oligonucleotides comprise a
XX subsequence of 8 or more nucleotides or nucleotide analogs, wherein the
XX subsequence is located within a sequence selected from ADM09444-ADM09586.
XX The oligonucleotides preferably contain one or more (preferably 6-10)
XX nucleotide analogs, especially a locked nucleic acid (LNA), and also
XX preferably contain a linkage group selected from a phosphate group, a
XX phosphorothioate group or a boranophosphate group. The invention also
XX relates to a conjugate comprising a survivin antisense oligonucleotide of
XX the invention and one or more non-nucleotide or non-polynucleotide
XX moieties covalently attached to the oligonucleotide; and a pharmaceutical
XX composition comprising a survivin antisense oligonucleotide or conjugate
XX of the invention, optionally further comprising a chemotherapeutic agent.
XX The survivin antisense oligonucleotides, and conjugates and compositions
XX containing them, are useful in the treatment of cancers such as
XX carcinomas (e.g., malignant melanoma, basal cell carcinoma, ovarian
XX carcinoma, breast carcinoma, non-small cell lung cancer, renal cell
XX carcinoma, bladder carcinoma, recurrent superficial bladder cancer,
XX stomach carcinoma, prostatic carcinoma, pancreatic carcinoma, lung
XX carcinoma, cervical carcinoma, colorectal carcinoma and carcinoma
XX papillomatosis, colon carcinoma, colorectal carcinoma and carcinoma
XX tumors); sarcomas (e.g., osteosarcoma, Ewing's sarcoma, chondrosarcoma,
XX malignant fibrous histiocytoma, fibrosarcoma, and Kaposi's sarcoma); or
XX gliomas. The survivin antisense oligonucleotides are also useful in the
XX treatment of conditions such as atherosclerosis, psoriasis, diabetic
XX retinopathy, rheumatoid arthritis, asthma, warts, and allergic
XX dermatitis. They may additionally be used for inhibiting cellular
XX proliferation, for modulating apoptosis and for treating a disease
XX related to abnormal angiogenesis. The survivin antisense oligonucleotides
XX of the invention are shorter than prior art survivin antisense
XX oligonucleotides (16-mers compared to 20-25-mers), therefore having

CC more LNA units that are targeted to survivin. (I) is useful as a
 CC medicament and for the manufacture of a medicament for the treatment of
 CC cancer, in combination with chemotherapeutic agent such as busulfan
 CC (myleran), carboplatin (paraplatin), Taxol, doxorubicin (adriamycin),
 CC etc. (I) or a conjugate (II) containing (I) is useful in the preparation
 CC of a medicament for the treatment of atherosclerosis, psoriasis, diabetic
 CC retinopathy, rheumatoid arthritis, asthma, warts and allergic dermatitis.
 CC (II) or a pharmaceutical (III) containing (I) is useful for treating
 CC cancer in the form of a solid tumour, sarcoma, glioma or carcinoma chosen
 CC from malignant melanoma, basal cell carcinoma, ovarian carcinoma, breast
 CC carcinoma, non-small cell lung cancer, renal cell carcinoma, bladder
 CC carcinoma, recurrent superficial bladder cancer, stomach carcinoma,
 CC prostatic carcinoma, pancreatic carcinoma, lung carcinoma, cervical
 CC carcinoma, cervical dysplasia, laryngeal papillomatosis, colon carcinoma,
 CC colorectal carcinoma and carcinoïd tumours. The malignant melanoma is
 CC chosen from superficial spreading melanoma, nodular melanoma, lentigo
 CC maligna melanoma, acral melanoma, amelanotic melanoma, and desmoplastic
 CC melanoma. The sarcoma is chosen from osteosarcoma, Ewing's sarcoma,
 CC chondrosarcoma, malignant fibrous histiocytoma, fibrosarcoma and Kaposi's
 CC sarcoma. The treatment further involves administration of a
 CC chemotherapeutic agent such as taxanes, preferably Taxol, Paclitaxel or
 CC Docetaxel. (I), (II) or (III) is also useful for preventing or limiting
 CC apoptosis or for preventing cellular proliferation. This sequence
 CC corresponds to an antisense oligonucleotide targeted to the human
 CC survivin gene.

 PT New oligomeric compound for the modulation of survivin, useful for
 PT treating e.g. cancers, atherosclerosis, psoriasis, diabetic retinopathy,
 PT rheumatoid arthritis, asthma, warts, or allergic dermatitis.
 XX
 XX Example 10; SEQ ID NO 273; 264pp; English.
 XX
 CC The invention relates to antisense oligonucleotides consisting of 8-50
 CC nucleotides and/or nucleotide analogs which inhibit expression of human
 CC survivin, an inhibitor of apoptosis which is also essential for cell
 CC division and angiogenesis. The antisense oligonucleotides comprise a
 CC subsequence of 8 or more nucleotides or nucleotide analogs, wherein the
 CC subsequence is located within a sequence selected from ADM09444-ADM09586.
 CC The oligonucleotides preferably contain one or more (preferably 6-10)
 CC nucleotide analogs, especially a locked nucleic acid (LNA), and also
 CC preferably contain a linkage group selected from a phosphate group, a
 CC phosphorothioate group or a boranophosphate group. The invention also
 CC relates to a conjugate comprising a survivin antisense oligonucleotide of
 CC the invention and one or more non-nucleotide or non-poly-nucleotide
 CC moieties covalently attached to the oligonucleotide, and a pharmaceutical
 CC composition comprising a survivin antisense oligonucleotide or conjugate
 CC of the invention, optionally further comprising a chemotherapeutic agent.
 CC The survivin antisense oligonucleotides, and conjugates and compositions
 CC containing them, are useful in the treatment of cancers such as
 CC carcinomas (e.g., malignant melanoma, basal cell carcinoma, ovarian
 CC carcinoma, breast carcinoma, non-small cell lung cancer, renal cell
 CC carcinoma, bladder carcinoma, recurrent superficial bladder cancer,
 CC stomach carcinoma, prostatic carcinoma, pancreatic carcinoma, lung
 CC carcinoma, cervical carcinoma, cervical dysplasia, laryngeal
 CC papillomatosis, colon carcinoma, colorectal carcinoma and carcinoïd
 CC tumors); sarcomas (e.g., osteosarcoma, Ewing's sarcoma, chondrosarcoma,
 CC malignant fibrous histiocytoma, fibrosarcoma, and Kaposi's sarcoma); or
 CC gliomas. The survivin antisense oligonucleotides are also useful in the
 CC treatment of conditions such as atherosclerosis, psoriasis, diabetic
 CC retinopathy, rheumatoid arthritis, asthma, warts, and allergic
 CC dermatitis. They may additionally be used for inhibiting cellular
 CC proliferation, for modulating apoptosis and for treating a disease
 CC related to abnormal angiogenesis. The survivin antisense oligonucleotides
 CC of the invention are shorter than prior art survivin antisense
 CC oligonucleotides (16-mers compared to 20-25-mers), therefore having
 CC increased specificity and affinity for survivin mRNA, and also have

CC putative regulatory region.

Modulating pathways leading to programmed cell death, by selecting a
PT target within Jun-N-terminal kinase pathway and interfering with the
PT target using agent that up or down regulates the JNK pathway.

Disclosure; Page 131; 131pp; English.

The invention relates to a novel method for modulating pathways leading
CC to programmed cell death, comprising selecting a target within the c-Jun-
CC N-terminal kinase (JNK) pathway, and interfering with the target using
CC an agent that either up regulates or down regulates the JNK pathway. The
CC method of the invention has cytostatic activity. A method of the
CC invention is useful for modulating pathways leading to programmed cell
CC death induced by TNFalpha, Fas, TRAIL, genotoxic agent such as
CC demorubicin or cisplatinum. Another method of the invention is useful
CC for screening and identifying an agent, preferably peptides, peptide
CC mimetics, peptide-like molecules, mutant proteins, cDNAs, antisense
CC oligonucleotides or constructs, lipids, carbohydrates or synthetic or
CC natural chemical compounds, that modulate JNK pathway in vitro. A method
CC of the invention may also be useful for treating cancer, and for
CC preventing apoptosis. Compounds that are capable of interfering with the
CC ability of Gadd45beta to associate with JNK2 are useful for treating
CC human diseases such as chronic inflammatory, and autoimmune conditions
CC and certain types of cancer. The present sequence is used in the
CC exemplification of the invention

New nucleic acid sequences of the optineurin gene are useful to detect
PT polymorphisms particularly single nucleotide polymorphisms in the
PT optineurin promoter to diagnose, prognose and treat glaucoma and related
PT disorders.

Claim 11; SEQ ID NO 103; 159pp; English.

The invention relates to an isolated nucleic acid (N1) comprising at
CC least 20 but not more than 1500 consecutive nucleotides of the optineurin
CC promoter appearing as ADE13990. Also included are the optineurin promoter
CC operably linked to a heterologous nucleic acid, a nucleic acid capable of
CC detecting a single nucleotide polymorphism (SNP) in the optineurin
CC promoter, a host cell comprising the promoter operably linked to a
CC heterologous sequence, diagnosing or prognosing glaucoma in a sample
CC obtained from a cell or bodily fluid (comprising detecting a polymorphism
CC in a promoter region of the optineurin gene, associated with a glaucoma
CC phenotype), detecting a SNP sequence variation in a sample containing
CC DNA, detecting the presence of an optineurin promoter sequence variation
CC in a sample containing DNA, determining the presence or increased
CC susceptibility to glaucoma or to a progressive ocular hypertensive
CC disorder resulting in loss of visual field in a patient (or the severity
CC or progression of glaucoma in a patient, comprising providing
CC amplification reaction primers that direct amplification of a selected
CC nucleic acid region containing the variation within the optineurin
CC promoter and amplifying the DNA) and detecting a polymorphism (comprising
CC obtaining a sample containing human genomic DNA, providing a nucleic acid
CC capable of detecting a SNP located within an optineurin promoter, and
CC detecting the polymorphism). The invention is used to diagnose and
CC prognose glaucoma and also to treat glaucoma related disorders. The
CC present sequence is an optineurin promoter motif, repeat element or

 PT Detecting a target nucleic acid, for identifying microorganisms,
 PT diagnosing infections or detecting genetic abnormalities, comprises
 PT producing and detecting double-stranded hybrids between probes and the
 PT target nucleic acid.
 XX
 PS Claim 53; Page 24; 128pp; English.
 XX
 CC The invention relates to detecting a target nucleic acid comprising (a)
 CC hybridising a single-stranded or partially single-stranded target nucleic
 CC acid to a capture sequence probe and a signal sequence probe to form
 CC double-stranded hybrids between the probes and the target nucleic acid,
 CC where the capture sequence probe and the signal sequence probe are
 CC capable of hybridising to non-overlapping regions within the target
 CC nucleic acid and not hybridising to each other, (b) adding a blocker
 CC probe to the hybridisation reaction, where the blocker probe hybridises
 CC to excess non-hybridised capture sequence probes, (c) binding the hybrid
 CC to a solid phase to form a bound hybrid, and (d) detecting the bound
 CC hybrid. The method is used to detecting a target nucleic acid. The method
 CC is useful for identifying and classifying microorganisms, diagnosing
 CC infectious diseases, detecting and characterising genetic abnormalities,
 CC identifying genetic changes associated with cancer, studying genetic
 CC susceptibility to disease, and measuring response to various types of
 CC treatment. The method is also useful for detecting the presence of
 CC nucleic acid in test samples. The method is not only rapid and sensitive,
 CC but is also highly specific and capable of discriminating highly
 CC homologous nucleic acid target sequences. Blocker probes comprising
 CC oligonucleotides complementary to the capture sequence probes are used in
 CC the method to eliminate excess capture sequence probe, thus reducing the
 CC background signal in detection and increasing specificity of the assay.
 CC The present sequence is a blocker probe derived from HSV-1, HSV-2, HPV or
 CC HBV sequences

 XX
 CC The invention relates to an isolated nucleic acid from a human gene
 CC encoding aminopeptidase P (XPNEP2), bradykinin receptor B1 (BDKRB1),
 CC tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein
 CC 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme
 CC 2 (ACE2) or protease inhibitor 4 (P14), comprising at least one
 CC polymorphic position. Also included are (1) a probe that hybridises to a
 CC polymorphic position as provided in the detailed summary of single
 CC nucleotide polymorphisms comprising additional 5' and 3' flanking genomic
 CC sequence; (2) analysing (M1) at least one nucleic acid sample comprising
 CC obtaining the sample from one or more individuals and determining the
 CC nucleic acid sequence at one or more polymorphic positions in a gene
 CC encoding a protein selected from the group above; (3) constructing (M2)
 CC haplotypes using the genes comprising grouping at least two nucleic acids
 CC ; (4) identifying (M3) an individual at risk of developing a disorder
 CC upon administration of an ACE inhibitor and/or vasopeptidase inhibitor
 CC using the polymorphic data; (5) a library of nucleic acids, each of which
 CC comprises one or more polymorphic positions within a gene encoding a
 CC human protein selected from the group above; and (6) genotyping (M4) an
 CC individual comprising obtaining a nucleic acid sample, determining the
 CC nucleotide present in at least one polymorphic position, and comparing at
 CC least one position with a known data set. The genes, (M1, M2, M3 and M4)
 CC and compositions are useful for detecting, diagnosing, treating,
 CC preventing various disorders such as angioedema and diseases which
 CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's
 CC disease, trachoma, and cardiovascular diseases, like angina pectoris,
 CC hypertension, heart failure, myocardial infarction, ventricular
 CC hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary
 CC artery disease, arteriosclerosis and/or atherosclerosis, and
 CC hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory
 CC arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic
 CC obstructive pulmonary disease (COPD) and enterocolitis (many other
 CC diseases and disorders are listed in the specification). The
 CC polynucleotides are also useful for chromosome identification. Antibodies

PT      New mutants of the human multiple tumor suppressor gene, useful as
PT      diagnostic markers of cancer, contain specific base alterations or
XX      deletions.
PS      Example 13; Col 51; 72pp; English.
XX
CC      The invention relates to variants (AAA1196-A11206) of the human multiple
CC      tumour suppressor 1 (MTS1) gene (AAA11165). The variants have the
CC      following changes relative to this sequence: A at any of positions 265,
CC      447, 330 and 329; T at any of positions 172, 238, 341 and 148 and
CC      deletions of nucleotides 290-294, 172-179 or 128-129. The variants are
CC      somatic mutations of MTS1, indicative of predisposition to melanoma and
CC      many other cancers, so detecting them is useful for diagnosis, prognosis
CC      and monitoring of cancer (including prenatal analysis). Cells and animals
CC      that express the variant are useful as model systems for identifying
CC      potential anticancer agents. This sequence represents a primer used to
CC      screen for the human MTS2 sequence (AAA11182)

XX
XX PT New vector useful for gene therapy of cancer associated with mutation in
XX PT tumor suppressor gene, comprises DNA sequence of multiple tumor
XX PT suppressor gene.
XX
XX PS Example 13; Col 52; 71pp; English.
XX
XX CC The present invention describes a vector (I) comprising an isolated DNA
XX CC sequence of a multiple tumour suppressor (MTS) gene having a
XX CC polynucleotide sequence of the human MTS1E1-beta. (I) is useful for
XX CC introducing wild-type MTS function to a cancerous or pre-cancerous cell
XX CC which carries diminished or mutant MTS alleles for suppressing neoplastic
XX CC growth of the recipient cells. (I) is also useful for increasing the
XX CC level of expression of MTS gene even in tumor cells in which the mutant
XX CC gene is expressed at a normal level but the gene product is not fully
XX CC functional. A host cell transformed with (I) is useful as a model system
XX CC to study cancer remission and drug treatment which promotes such
XX CC remission. The present invention relates to somatic mutations and germ
XX CC line mutations in the MTS gene and their use in the diagnosis and
XX CC prognosis of human cancer e.g. melanoma, leukaemia, astrocytoma,
XX CC glioblastoma, lymphoma, glioma, Hodgkin's lymphoma, and cancers of the
XX CC pancreas, breast, thyroid, ovary, uterus, testis, kidney, stomach and
XX CC rectum. The present sequence represents a PCR primer used in the
XX CC amplification of human MTS2, which is used in an example from the present
XX CC invention

PT      Diagnosing a polymorphism associated with a predisposition for cancer.  
XX  
PS      Example 13; Col 51; 74pp; English.  
XX  
CC      This sequence is a PCR primer for DNA encoding the human MTS2 protein.  
CC      The invention relates to a method for diagnosing a polymorphism  
CC      associated with a predisposition to cancer by detecting a germ-line  
CC      alteration of a wild-type Multiple Tumour Suppressor (MTS) gene or its  
CC      expression products in a human sample. The method comprises detecting a  
CC      germ-line alteration of a wild-type MTS gene or its expression products  
CC      in a human sample, the alteration indicating a predisposition to at least  
CC      one of the cancers. The cancer is selected from melanoma, leukaemia,  
CC      astrocytoma, glioblastoma, lymphoma, glioma, Hodgkin's lymphoma, chronic  
CC      lymphocytic leukemia (CLL), and cancers of the pancreas, breast,  
CC      thyroid, ovary, uterus, testis, kidney, stomach and rectum. The method  
CC      may be used as the basis for developing very important diagnostic tests  
CC      capable of predicting the predisposition to cancer. The MTS gene is  
CC      involved in the progression of multiple tumour types and may provide  
CC      means for a general anti-cancer therapy by virtue of its ability to  
CC      suppress tumour growth

 XX
 CC The present invention describes the detection of drug-selected mutations
 CC in the HIV protease gene. The method of detection allows the simultaneous
 CC characterisation of a range of codons involved in drug resistance using
 CC sets of probes optimised to function together in a reverse-hybridisation
 CC assay. AA297517 to AA297997 represent specifically claimed probes for use
 CC in the assay, and AA297479 to AA297501 represent specifically claimed HIV
 CC protease gene polymorphic nucleotide sequences. AA297502 to AA297515, and
 CC AA298004 to AA298007, represent PCR primers for the HIV protease gene,
 CC and AA297516 represents an HIV protease probe used in an example from the
 CC present invention. The method, probes and primers can be used for the
 CC detection of drug-selected mutations in the HIV protease gene. The method
 CC allows the simultaneous characterisation of a range of codons involved in
 CC drug resistance. The method may also be used for HIV protease genotyping
 CC assays. The probes are able to discriminate between wild type and mutated
 CC protease sequences. The method allows rapid and reliable detection of
 CC drug-selected mutation in HIV. (Updated on 15-SEP-2003 to standardise OS
 CC field)

CC suppressor (MTS) gene, to diagnose and treat cancer. The MTS gene is
 CC useful in the diagnosis and prognosis of human cancer, e.g. by standard
 CC nucleic acid hybridisation techniques, of patient samples. The mutated
 CC sequences are those that are present in somatic mutations of the gene in
 CC cancers. The vectors can be used for gene therapy strategies to replace
 CC function of the mutated protein in patients. These can also be used to
 CC construct protein mimetics, also for therapeutic strategies. In addition
 CC the expression constructs can also be used for recombinant production of
 CC MTS. Recombinant MTS can be used to screen for drugs to be used for
 CC cancer therapy, and the protein itself may also be used to restore MTS
 CC function in a cell

DNA specific for Multiple Tumour Suppressor 1E1-beta gene - are useful
 for the diagnosis of cancers related to MTS1E1-beta mutation(s) and their
 treatment.

Example 13; Col 81-82; 72pp; English.

Primer AAV1255 is used in the isolation of the human multiple tumour
 suppressor protein, MTS2. The MTS gene locus is also referred to as the
 familial melanoma (MLM) gene locus, located on human chromosome 9p21.

Germ line mutations in MTS genes can be used in the diagnosis of
 predisposition to cancers, e.g. melanoma, leukaemia, astrocytoma,
 glioblastoma, lymphoma, Hodgkin's lymphoma, CLL, and cancers of
 the pancreas, breast, thyroid, ovary, uterus, testis, kidney, stomach and
 rectum

PT Novel cholinergic receptor, muscarinic 5 polynucleotide useful
PT therapeutically and in screening for candidate drug to treat diseases
PT related to the receptor activity.
XX
PS Claim 14; Page 13; 72pp; English.
XX
CC The present invention relates to a new cholinergic receptor, muscarinic 5
CC (CHRM5) polynucleotide comprising a sequence which is a polymorphic
CC variant for a reference sequence for the CHRM5 gene or its fragment, or a
CC polymorphic variant of a reference sequence for a CHRM5 cDNA or its
CC fragment. The invention is useful in drug screening assays. The molecules
CC of the invention are useful in studying the expression and function of
CC CHRM5, and in expressing CHRM5 protein for use in screening for candidate
CC drugs to treat diseases related to CHRM5 activity. The methods of the
CC invention are useful in developing diagnostic tests and therapeutic
CC treatments. The method is also useful in the design of clinical trials of
CC candidate drugs for treating specific condition or disease associated
CC with CHRM5 activity and is useful in determining whether an individual
CC has one of the haplotypes or one of the haplotype pairs. The invention is
CC useful in a variety of diagnostic and prognostic formats and therapeutic
CC methods. The invention is also useful in genotyping and/or haplotyping
CC the CHRM5 gene in an individual. The present nucleic acid sequence
CC represents one of a collection of allele-specific oligonucleotide (ASO)
CC primers (ABK81775-ABK81794) that were used in the invention to detect
CC polymorphisms in the human CHRM5 gene

PT Novel cholinergic receptor, muscarinic 5 polynucleotide useful
PT therapeutically and in screening for candidate drug to treat diseases
PT related to the receptor activity.
XX
PS Claim 14; Page 13; 72pp; English.
XX
CC The present invention relates to a new cholinergic receptor, muscarinic 5
CC (CHRM5) polynucleotide comprising a sequence which is a polymorphic
CC variant for a reference sequence for the CHRM5 gene or its fragment, or a
CC polymorphic variant of a reference sequence for a CHRM5 cDNA or its
CC fragment. The invention is useful in drug screening assays. The molecules
CC of the invention are useful in studying the expression and function of
CC CHRM5, and in expressing CHRM5 protein for use in screening for candidate
CC drugs to treat diseases related to CHRM5 activity. The methods of the
CC invention are useful in developing diagnostic tests and therapeutic
CC treatments. The method is also useful in the design of clinical trials of
CC candidate drugs for treating specific condition or disease associated
CC with CHRM5 activity and is useful in determining whether an individual
CC has one of the haplotypes or one of the haplotype pairs. The invention is
CC useful in a variety of diagnostic and prognostic formats and therapeutic
CC methods. The invention is also useful in genotyping and/or haplotyping
CC the CHRM5 gene in an individual. The present nucleic acid sequence
CC represents one of a collection of allele-specific oligonucleotide (ASO)
CC primers (ABK81775-ABK81794) that were used in the invention to detect
CC polymorphisms in the human CHRM5 gene

PT	Determining the genetic affinity of organisms or viruses useful in
PT	bioerrorism, comprises determining which nodes in the bifurcating tree
PT	of genetic relationship that designs the signature probes produces the
PT	hybridization signal.
XX	
XX	Claim 15; Page 36; 62pp; English.
XX	
CC	The present invention relates to a new method for determining the genetic
CC	affinity of organisms or viruses in the test sample. The method involves
CC	identifying the closest known genetic relatives of the organisms or virus
CC	by determining which nodes in the bifurcating tree of genetic
CC	relationship was used to design the signature probe. The method is
CC	useful in identifying the phylogenetic affinity of an unknown organism
CC	useful for unanticipated problems involving microorganisms that concerns
CC	space flight, medicine, indoor air quality, bioweapons of mass
CC	destruction, or epidemics. The signature sequences are useful in the
CC	hybridisation to determine the phylogenetic tree positions of the
CC	organisms in the sample. The method can also be useful as an assay for
CC	bioerrorism. Air filtrate from a government building was collected and
CC	nucleic acids isolated. RNA was enriched using DNase and RNA fragmented
CC	by heating. Probes specific to several known bioerrorism agents give
CC	negative results. Molecular beacon based scoring of signature sequences
CC	reveals the presence of unexpectedly high concentrations of Bacteria with
CC	genetic affinity to genus Bacillus. The method provides a more rapid
CC	approach for determining the affinity of organisms in the test sample.

CC	The methodology is more general than the specifically targeted tests of
CC	the Kohne approach, and faster and more convenient than detailed
CC	sequencing of the rRNAs or their encoding DNA. The present nucleic acid
CC	sequence represents an RNA sequence that was used in the methods of the
CC	invention for sample identification

CC	drugs to treat diseases related to CHRM5 activity. The methods of the
CC	invention are useful in developing diagnostic tests and therapeutic
CC	treatments. The method is also useful in the design of clinical trials of
CC	candidate drugs for treating specific condition or disease associated
CC	with CHRM5 activity and is useful in determining whether an individual
CC	has one of the haplotypes or one of the haplotype pairs. The invention is
CC	useful in a variety of diagnostic and prognostic formats and therapeutic
CC	methods. The invention is also useful in genotyping and/or haplotyping
CC	the CHRM5 gene in an individual. The present nucleic acid sequence
CC	represents one of a collection of allele-specific oligonucleotide (ASO)
CC	probes (ABK81765-ABK81774) that were used in the invention to detect
CC	polymorphisms in the human CHRM5 gene

CC The invention comprises DNA, cDNA and protein sequences of the human
 CC electron-transfer flavoprotein, beta polypeptide (ETFB) gene (located on
 CC chromosome 19q13.3-13.4). The invention specifically relates to the
 CC identification of 27 novel polymorphic sites within the ETFB gene.
 CC Electron-transfer flavoprotein (ETP) is an obligatory electron acceptor
 CC for nine primary flavoprotein dehydrogenases and is located in the
 CC mitochondrial matrix. ETP is composed of an alpha (ETFA) and a beta
 CC (ETFB) subunit. Electrons accepted by ETP are transferred to the
 CC mitochondrial respiratory chain by ETP dehydrogenases (ETPDHs).
 CC Deficiency of ETP or ETPDH leads to glutaric acidemia type II (GATII).
 CC Therefore ETFB is a pharmacologically-important gene in the treatment of
 CC GATII. The novel ETFB polymorphisms identified in the invention are useful
 CC for genotyping and haplotyping the ETFB gene of an individual. The ETFB
 CC protein and nucleic acids of the invention are useful for studying the
 CC expression and function of ETFB in vivo. The ETFB protein and nucleic
 CC acids are also useful for testing the efficacy of therapeutic agents and
 CC compounds for glutaric acidemia type II. The nucleic acids of the
 CC invention are useful in the production of a transgenic animal expressing
 CC the ETFB gene. Nucleic acids ABU39414-ABU39440 represent claimed ETFB
 CC allele-specific probes. Nucleic acids ABU39441-ABU39494 represent claimed
 CC ETFB allele-specific PCR primers. Nucleic acids ABU39495-ABU39548
 CC represent claimed ETFB primer-extension oligonucleotides

XX New genetic variants having polymorphisms in the human interleukin 12B
 PT (IL12B) gene, useful for studying the function of IL12B, and for creating
 PT disorders affected by expression or function of the IL12B isogene.

PS Claim 16; Page 13; 95pp; English.

XX The invention relates to an isolated polynucleotide, comprising genes and
 CC haplotypes of the interleukin 12B (IL12B) gene. The polynucleotide
 CC comprises polymorphic sites in the IL12B gene, referred to as PSI-11. The
 CC observed and identified haplotypes, isogenes and polymorphisms of the

CC IL12B gene, as well as the locations of these polymorphisms, are fully
 CC defined in a table in the specification. Also described is an isolated
 CC polypeptide comprising an amino acid sequence which is a polymorphic
 CC variant of a reference sequence for the IL12B protein or its fragment.
 CC Polynucleotides comprising a polymorphic gene variant or fragment may be
 CC used for therapeutic purposes, where a patient could benefit from
 CC expression or increased expression of a particular IL12B protein isoform,
 CC or an expression vector encoding the isoform may be administered to the
 CC patient. IL12B peptide variants may be used to as antigens to generate
 CC antibodies specific for the IL12B isoforms, and in drug screening assays.
 CC Compositions comprising the polynucleotide of the isogenes may be used to
 CC treat disorders affected by expression or function of the IL12B isogene.
 CC ABK34177-ABK34231 represent human interleukin 12B gene, allele-specific

XX Novel genetic variants of Cerberus 1 (Xenopus laevis) Homolog (Cysteine
 PT Knot Superfamily) (CER1) isogenes, useful for improving efficiency and
 PT reliability in drug development for treating developmental disorders.

PS Claim 14; Page 13; 75pp; English.

XX The invention relates to the identification of 13 novel polymorphic sites
 CC in the human cerberus 1 (Xenopus laevis) homologue (cysteine knot
 CC superfamily) (CER1) gene. The invention also comprises the amino acid and
 CC coding sequence of CER1. The CER1 protein is useful for screening drugs
 CC that target CER1 - for the treatment of developmental disorders. The CER1
 CC coding sequence is useful in studying the expression of CER1 isogenes,
 CC for screening and testing of drugs targeted against CER1 protein, and in
 CC testing the efficacy of therapeutic agents for treating developmental
 CC disorders. The 13 novel polymorphic sites identified in the invention are
 CC useful for haplotyping the CER1 gene of an individual. The present DNA
 CC sequence represents a human CER1 gene allele-specific oligonucleotide

PT Enzymatic nucleic acid molecules able to cleave separate RNA molecules
PT are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,
XX obesity and heart disease.
XX
PS Example 16; Page 619; 717pp; English.
XX
XX The present invention relates to the use of enzymatic nucleic acid
CC molecules (e.g. ribozymes) to modulate gene expression. The invention
CC also methods for their use to down regulate or inhibit the expression of
CC genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine
CC aminopeptidase (MeAP-2), human telomerase (hTERT), protein kinase C
CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
CC receptor-2 (HER2/C-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
CC nucleic acid molecules used to inhibit the expression of the said genes
CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
CC zinzyme, and/or DNAzyme motifs. The methods of the invention are useful
CC for treating cancer, in particular breast cancer, Alzheimer's disease,
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC diseases, hepatitis B infections, and hepatitis and hepatocellular
CC carcinoma. The enzymatic nucleic acid molecules can also be used as
CC diagnostic tools to examine genetic drift and mutations within diseased
CC cells and to detect the presence of specific RNA in a cell. The present
CC sequence represents a substrate/target sequence for a ribozyme used in
CC the examples of the present invention. Note: Some SEQ ID Nos are repeated
CC more than once in the specification, but these have different sequences
CC associated with them.

XX
XX The present sequence represents a preferred target sequence for an
XX enzymatic nucleic acid (i.e. a ribozyme) which cleaves TNF-alpha mRNA at
XX CC the nucleotide base position indicated in the DE line. Regions of the
XX CC mRNA that do not form secondary folding structures and that contain

CC potential hammerhead and hairpin ribozyme cleavage sites were identified
CC by computer analysis. Ribozymes directed against these mRNA sequences
CC were designed and synthesised with modifications that improve their
CC nuclease resistance. The ribozymes are designed to cleave the target
CC sequences and thereby inhibit TNF-alpha expression, making them
CC potentially useful for treating rheumatoid arthritis, septic shock and
CC other inflammatory disorders including psoriasis, as well as for
CC treatment of AIDS. (Updated on 25-MAR-2003 to correct PI field.)

XX
XX PT New haplotypes of the FK506-binding protein 8 gene, useful for genotyping
XX PT that gene in individual and to design new therapy for associated disease
XX PT such as immunosuppression and cancer.
XX
XX PS Claim 15; Page 13; 98pp; English.
XX
XX The invention relates to haplotyping the FK506-binding protein 8 (38kD)
XX (FKBP8) gene in an individual. The method involves determining the
XX CC identity of the nucleotide pair at one or more polymorphic sites selected
XX CC from PI to p26 (described in the specification). The invention is useful
XX CC to improve the efficiency and reliability of several steps in the
XX CC discovery and development of drugs for treating diseases associated with
XX CC FKBP8 activity, for example immunosuppression and cancer. Sequences
XX CC AA167274-299 represent allele-specific oligonucleotide (ASO) probes for
XX CC detecting FKBP8 gene polymorphisms

XX Claim 2; Page 177; 407pp; English.

CC The present sequence represents a preferred target sequence for an
CC enzymatic nucleic acid (i.e. a ribozyme) which cleaves ICAM-1 mRNA at the
CC nucleotide base position indicated in the DE line. Regions of the mRNA
CC that do not form secondary folding structures and that contain potential
CC hammerhead and hairpin ribozyme cleavage sites were identified by
CC computer analysis. Ribozymes directed against these mRNA sequences were
CC designed and synthesised with modifications that improve their nuclease
CC resistance. The ribozymes cleave the ICAM-1 target sequences and thereby
CC inhibit ICAM-1 expression, making them useful for reducing transplant
CC rejection and alleviating symptoms in patients with rheumatoid arthritis,
CC asthma and other inflammatory disorders. (Updated on 25-MAR-2003 to

PT New oligonucleotide primers for diagnosis of genetic diseases and traits
PT in dogs - amplify specific regions of the genome containing
PT microsatellite repeats, especially for diagnosing copper toxicosis and
PT carriers.
XX
PS Claim 1; Page 18; 40pp; English.
XX
CC This invention relates to novel oligonucleotide PCR primers which may be
CC used to identify markers associated with genetic diseases and traits in
CC dogs, in particular to diagnose genetic diseases that are not
CC phenotypically visible and to identify carriers of recessive diseases. A
CC specific application is diagnosis of copper toxicosis (CT). The invention
CC can also be used to create a genetic map of the canine genome; to
CC generate breed-specific profiles; to establish paternity and to identify
CC dogs from DNA fingerprints. The method provides rapid analysis of the
CC target sequences from only a small sample of DNA. Diagnosis can be done
CC at any time in the dog's life. The present sequence is that of a PCR
CC primer of the invention.

 XX Identifying a candidate polymorphic repeat within a coding sequence, for
 PT understanding or treating genetic disease, comprises detecting tandem
 PT repeats in a target coding sequence and scoring the repeats for
 PT polymorphic probability.
 XX
 XX Example; Col 267; 588pp; English.

XX The invention discloses a method for identifying a candidate polymorphic
 CC repeat within a coding sequence (expressed sequence tag, EST), which
 CC comprises detecting tandem repeats in a target coding sequence, scoring
 CC the repeats for polymorphic probability and generating a dataset
 CC correlating the repeats with polymorphic probability to identify a
 CC candidate polymorphic repeat. The computational methods (polymorphic
 CC marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are
 CC useful for identifying and detecting candidate polymorphic repeats in
 CC human genes, which can be used to understand, treat or eliminate genetic
 CC diseases, predispositions or adverse drug-treatment reactions. Examples
 CC of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
 CC syndrome, Huntington's disease, fragile-X syndrome, Friedrich's ataxia,
 CC myotonic dystrophy, hyperandrogenemia, spinal and bulbar atrophy and
 CC spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
 CC the polymorphic repeats identified for a search of human ESTs

XX The invention relates to a method of remodeling a dendrite comprising
CC transfecting a dendrite with an RNA comprising at least one intron, where
CC the dendrite comprises at least one component of a spliceosome and
CC further where the component of a spliceosome is capable of splicing an
CC RNA, allowing the RNA comprising at least one intron to be translated in
CC spliceosome components and allowing the spliced RNA to be translated in
CC the dendrite, where the dendrite is thus remodeled as a consequence of
CC the translation. The invention also relates to a method of remodeling a
CC dendrite interaction, a method of remodeling a synaptic network
CC comprising interaction with at least one dendrite, methods of splicing an
CC RNA and methods of translating an RNA. The splicing and translating
CC methods can alternatively be applied to an isolated synaptonemalosome
CC instead of the isolated dendrite. The methods are useful for remodeling a
CC dendrite, preferably for remodeling a synaptic network. This sequence
CC represents DNA encoding dendritically-spliced RNA used in the method of
CC the invention.

XX Enzymatic nucleic acid molecules able to cleave separate RNA molecules
XX are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,
XX obesity and heart disease.
XX
XX Example 3; Page 260; 717pp; English.

XX The present invention relates to the use of enzymatic nucleic acid
XX molecules (e.g. ribozymes) to modulate gene expression. The invention
XX also methods for their use to down regulate or inhibit the expression of
XX genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine
XX aminopeptidase (MetAP-2), human telomerase (hTER), protein kinase C

CC vector of (3): (6) a method of treating a patient having a condition
CC associated with HCV infection, by contacting cells of the patient with
CC the nucleic acid molecule, and further employing one or more drug
CC therapies; (7) a method for inhibiting HCV replication in a mammalian
CC cell by administering the novel enzymatic nucleic acid; and (8) a method
CC of cleaving a separate RNA molecule by contacting the novel enzymatic
CC nucleic acid with the separate RNA molecule. The enzymatic nucleic acid
CC is useful for modulating the expression and/or replication of hepatitis C
CC virus (HCV), and for inhibiting the expression of HCV minus strand. The
CC nucleic acid may also be used to treat or prevent the occurrence of a
CC disease state in a patient. The present sequence represents an HCV
CC hammerhead ribozyme target substrate sequence which is used in the
CC exemplification of the present invention.

PT Novel isolated chimeric polypeptide comprising first amino acid sequence
PT homologous to TRIC-HUMAN sequence, useful as biomarkers for diagnosing
PT heart disease such as myocardial infarct, angina pectoris, cardiomyopathy
PT and myocarditis.
PS Example 2; SEQ ID NO 269; 822pp; English.
XX

CC The present invention relates to a chimeric polypeptide (I) useful as a
CC biomarker for cardiac disease chosen from a chimeric polypeptide of SEQ
CC ID Nos. 301, 302, 303 or 304, comprising a first amino acid sequence
CC of at least 90% homologous to amino acids 1-124, 1-8, 1-36 or 1-8 of
CC TRIC-HUMAN, and a second amino acid sequence at least 95% homologous to a
CC polypeptide sequence corresponding to amino acids 125-137, 36-209, 37-66
CC or 9-13 of SEQ ID Nos. 301, 302, 303 or 304, where the first and second
CC amino acid sequences are contiguous and in a sequential order. (I) also
CC comprises an isolated polypeptide comprising a protein variant of SEQ ID
CC Nos. 301-304, or the sequence of tropoin I variant (SEQ ID Nos. 325, 354
CC -356 or 387). (I) can be an isolated polypeptide for a tail of SEQ ID No.
CC 301, 303 or 304, and an isolated chimeric polypeptide encoding for an
CC edge portion of SEQ ID No. 302, where at least two amino acids comprise
CC AK. Also claimed is an isolated polynucleotide (II) comprising a
CC transcript or the DNA sequence of Histropoin T7 PRSER, (SEQ ID Nos. 22-
CC 25, 353 or 386); or a segment chosen from a SEQ ID Nos. 110-149; an
CC isolated oligonucleotide, comprising an amplicon (III) chosen from a
CC sequence of humtropa seg1 amplicon, humtropa seg2 amplicon, amplicon
CC humtropa seg23-24-25 (SEQ ID No. 379, 382 or 385); a primer pair (IV),
CC capable of amplifying (III); an antibody (V); a kit (VI) for detecting
CC heart disorders, by detecting overexpression of a splice variant of (I)
CC or (II); detecting (MI) heart disorders, by detecting overexpression of a
CC splice variant of (I) or (II); and a biomarker (VII) capable of detecting
CC heart disorders. The heart disorder is a myocardial infarct, angina
CC pectoris, cardiomyopathy, myocarditis, congestive heart failure.
CC Identification of differentially expressed gene products and ESTs was
CC carried out by algorithm method and computer analysis. Splice variants
CC were identified by using the LEADS software package. The present sequence
CC is a human myosin heavy chain protein transcript.

PT New ribozymes targeting RNA derived from hepatitis C virus inhibit viral
XX replication and are useful to treat hepatitis C virus infections and
XX cirrhosis, liver failure or hepatocellular carcinoma.
XX
PS Claim 1; Page 47; 80pp; English.
XX
CC The present invention relates to enzymatic nucleic acids which
XX specifically cleave RNA derived from Hepatitis C virus (HCV). The
XX enzymatic nucleic acid or ribozyme is in a hammerhead (HH) or hairpin
XX (HP) motif where the binding arms comprise sequences complementary to one
XX of the substrate sequences defined in the specification. The HCV
XX ribozymes are useful for modulating the expression and/or replication of

CC HCV. They can be used to treat cirrhosis, liver failure and/or
CC hepatocellular carcinoma. The HCV ribozymes are also useful for treating
CC a condition associated with HCV infection in conjunction with one or more
CC other drug therapies, particularly type I interferon, especially
CC interferon alpha, beta or gamma or consensus interferon. The present
CC sequence represents a substrate for a HCV hammerhead (HH) ribozyme. Note:
CC Some of the sequence data for this patent did not form part of the
CC printed specification. The complete sequence data for this patent was
CC obtained in electronic format directly from the USPTO web site at
CC seqdata.uspto.gov/patids/entry.html

PT polymorphisms.
XX
XX Claim 15; Page 46; 53pp; English.
XX
XX This sequence is a the human cholinergic receptor, muscarinic 5 (CHRM5)
CC gene, allele specific oligonucleotide. The invention relates to a
CC polymorphic variant of the CHRM5 gene sequence. The polymorphic sequence
CC is useful to genotype or haplotype the CHRM5 gene, to predict a haplotype
CC pair for the CHRM5 gene, and for identifying an association between a
CC trait (such as a clinical response to a drug targeting CHRM5). It is also
CC useful in gene therapy in patients who lack the CHRM5 isogene or have
CC only one copy of it, and in assays to measure the binding affinities of
CC one or more candidate drugs targeting CHRM5. The DNA sequence is used in
CC the treatment of disorders affected by expression or function of a novel
CC CHRM5 isogene of the invention. The protein encoded by the CHRM5 variant
CC is useful to identify drugs which target the CHRM5 polymorphic variant
CC protein. Antibodies against the protein can be used to neutralise the
CC CHRM5 isoform actively expressed in an individual, and is useful in
CC detection of CHRM5 in immunocytochemical, immunohistochemical and
CC immunofluorescence. A composition containing a genotyping oligonucleotide
CC for detecting a polymorphism in the CHRM5 gene is used to detect novel
CC CHRM5 polymorphisms of the invention

 XX Novel polymorphic variant of reference sequence for human cholinergic
 PT receptor, muscarinic 3 gene, useful for diagnostic and therapeutic
 PT purposes.
 XX
 XX Claim 15; Page 19; 54pp; English.
 XX
 CC The patent relates to polymorphic variants of human cholinergic receptor,
 CC muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
 CC single nucleotide polymorphism selected from cytosine at PS1, adenine at
 CC PS2 or PS3, and cytosine at PS4. The invention also relates to a method
 CC for genotyping and haplotyping the CHRM3 gene for identification of
 CC variants. The polymorphic variant is useful for therapeutic purposes, for
 CC studying the expression and biological function of CHRM3, as well as for
 CC developing drugs targeting the CHRM3 protein. The variant is also useful
 CC in diagnostics and forensic applications. The recombinant nonhuman
 CC organism transfected with the polymorphic variant is useful for studying
 CC expression of CHRM3 isogenes in vivo, for in vivo screening and testing
 CC of drugs targeted against CHRM3 protein, and for testing the efficacy of
 CC therapeutic agents and compounds for Alzheimer's disease, Sjogren's
 CC syndrome, disorders associated with smooth muscle contractility and
 CC sudden infant death syndrome. The CHRM3 protein variant is useful in drug
 CC screening assays and its antibodies are useful in immunoassays to detect
 CC CHRM3 protein variants in biological samples. The present sequence is an
 CC allele-specific oligonucleotide (ASO) primer used for detecting human
 CC CHRM3 gene polymorphism

XX
XX New variants of phosphorylase kinase gamma 2 isoenzymes, useful for
XX improving efficiency and reliability in the development of drugs for
XX treating diseases e.g. liver cirrhosis.
XX
XX Claim 16; Page 13; 76pp; English.
XX
XX The present invention describes an isolated polynucleotide (I) comprising
XX a nucleotide sequence which is a polymorphic variant of a reference
XX sequence for human phosphorylase kinase gamma2 (testis) (PHKG2) gene or
XX its fragment, or a polymorphic variant of a reference sequence for a
XX PHKG2 cDNA or its fragment. Also described is an isolated polypeptide
XX (II) comprising an amino acid sequence which is a polymorphic variant of
XX a reference sequence for PHKG2 protein or its fragment, where the
XX reference sequence comprises a sequence (see ABB09290) of 406 amino
XX acids, and the polymorphic variant comprises one or more variant amino
XX acids selected from glutamic acid at a position corresponding to amino
XX acid position 153 and tryptophan at position corresponding to amino acid
XX position 339. (I) has hepatotropic activity and can be used in gene
XX therapy. (II) is useful in screening for drugs targeting (II), by
XX contacting a PHKG2 polymorphic variant with a candidate agent and
XX assaying for binding activity. The identified candidate agents targeting
XX PHKG2, are useful for treating liver cirrhosis and glycogen storage
XX diseases. The present sequence represents an allele specific
XX oligonucleotide (ASO) primer for the PHKG2 gene, which is used in the
XX exemplification of the present invention

XX
XX Enzymatic nucleic acid molecules having a hammer-head motif - used for
XX the treatment of arthritis, induction of graft tolerance or treatment of
XX auto-immune diseases.
XX
XX Claim 10; Page 167; 307pp; English.
XX
XX The present invention describes a novel enzymatic nucleic acid (ENA)
XX having a hammerhead motif (HM) comprising: (i) at least 5 ribose residues
XX; (ii) a 2'-C-allyl modification at position 4 of the ENA; (iii) at least
XX ten 2'-O-methyl modifications; and (iv) a 3'-end modification. The ENA's
XX can inhibit collagenase and stromelysin production in the synovial
XX membrane of joints for the treatment or prevention of arthritis,
XX particularly osteoarthritis or rheumatoid arthritis. The ENA's can also
XX be used to treat antigen presenting cells of a donor to induce tolerance
XX in a recipient to an alloantigen of a donor. They can also be used for
XX enhancing graft tolerance or for treating autoimmune disease, and for
XX treating allergies and other inflammatory conditions. The ENA's can also
XX be used in diagnosis. Ribozyme therapy impacts on the expression of
XX stromelysin without introducing the non-specific effects upon gene
XX expression which accompany treatment with retinoids and dexamethasone.
XX The concentration of ribozyme required to affect a therapeutic treatment
XX is lower than that required of antisense molecules, and is highly
XX specific. The present sequence is used in the exemplification of the
XX present invention

PT by multiplex PCR at region of locus of blood cell antigen containing
PT nucleotide polymorphism, determining genotype for blood cell antigens
PT using chimeric primers.
XX
XX Claim 13; SEQ ID NO 95; 80pp; English.
PS
XX The invention relates to genotyping (M1) blood cell antigens, comprising
CC subjecting DNA from the individual to a multiplex PCR to amplify (and
CC detectably label) a region of the locus of different blood cell antigens
CC containing the site of a nucleotide polymorphism (arranged in an array)
CC and using the amplified and labeled DNA fragments to determine the
CC genotype for each of the blood cell antigens, using a pair of blood cell
CC antigen-specific chimeric primers and a detectably labeled universal
CC primer. Also included are a kit (1) for genotyping blood cell antigens by
CC (M1) (comprising a pair of blood cell antigen-specific chimeric primers
CC for each blood cell antigen to be genotyped and a detectably labeled
CC universal primer, preferably a pair of detectably labeled universal
CC primer), a set of blood cell antigen-specific chimeric primer pairs
CC useful in a multiplex PCR (comprising at least two, preferably
CC substantially all of chimeric primers) and a set of blood cell antigen
CC allele-specific oligonucleotide probes useful for genotyping blood cell
CC antigens. (M1) enables genotyping of large number of blood cell antigens
CC and is a practical, rapid and reliable method for analyzing the
CC hybridization results to assign the clinically relevant blood cell
CC antigen genotypes. The present sequence is a blood group antigen specific
CC probe useful in the method of the invention.

XX XX Novel double-stranded short interfering RNA molecule having first
XX PT nucleotide sequence complementary to RNA encoding HER2 or its portion,
XX PT and second nucleotide sequence having complementarity to first sequence,
XX PT useful for treating cancer.
XX
PS Example 10; SEQ ID NO 5607; 143pp; English.
XX
XX The invention relates to a double-stranded short interfering RNA (siRNA)
XX molecule (I) comprising a first nucleotide sequence having 19-23
XX nucleotides complementary to an RNA sequence encoding HER2 or its
XX portion, and a second nucleotide sequence having 19-23 nucleotides
XX exhibiting complementarity to the first sequence, and including at least
XX one nucleotide that is not a 2'-OH containing ribonucleotide. Also
XX described is a method of producing a class of nucleic acid-based gene
XX modulating agents that exhibit a high degree of specificity for RNA of a
XX desired target. (I) is useful for modulating HER2 activity in a cell, and
XX for treating diseases or conditions related to levels of HER2 gene
XX expression. (I) is useful for treating cancer, such as pancreatic cancer,
XX bladder cancer, lung cancer, breast cancer or prostate cancer. The
XX present sequence represents a human HER2 substrate RNA sequence for a
XX DNAzyme (ribozyme), which is used in an example from the present
XX invention for the identification of potential target sites in human HER2
XX RNA.

XX PT New diagnostic composition comprising specific nucleic acid molecules,
XX PT useful for diagnosing or developing a compound for treating inflammatory
XX PT bowel diseases or related disease e.g., Crohn's disease and ulcerative
XX PT colitis.
XX
XX PS Example 1; SEQ ID NO 5; 63pp; English.
XX
XX CC This invention relates to a novel diagnostic composition that comprises
XX CC nucleic acid molecules bound to a solid support (or microarray), wherein
XX CC each nucleic acid can hybridise to an mRNA of a gene that shows abnormal

CC expression in an gastrointestinal condition. Specifically, it refers to
CC DNA oligos useful for preparing a microarray chip for the diagnosis of
CC inflammatory bowel disease, Crohn's disease, ulcerative colitis or a
CC disposition thereof. The present invention describes nucleic acid
CC molecules useful for screening methods to identify compounds that can be
CC used for therapy or to prevent progression of the aforementioned
CC conditions. As such, the pharmaceutical compositions developed
CC accordingly exhibit antiinflammatory and anticulcer activities. This
CC oligonucleotide sequence is an RT-PCR primer used to amplify a human DNA
CC sequence differentially expressed in gastrointestinal disorders, given in
XX an exemplification of the invention.

XX Enzymatic nucleic acid molecules which specifically cleave RNA derived
PT from hepatitis C virus (HCV), useful for the treatment of HCV infections,
PT especially in combination with type I interferon therapy.
XX
XX Claim 1; SEQ ID NO 3139; 198bp; English.
XX
XX The invention relates to an enzymatic nucleic acid molecule which
CC specifically cleaves RNA derived from hepatitis C virus (HCV), in which
CC the binding arms of the enzymatic nucleic acid molecule comprises
CC sequences complementary to any of the defined substrate sequences given
CC in the specification. The nucleic acid molecule may be administered for
CC the treatment of HCV infections, especially in combination with type I
CC interferon. The present sequence represents a HCV DNAzyme substrate
CC sequence.

PT Novel enzymatic nucleic acid molecule, such as DNAszymes and inozymes
PT specifically cleaving RNA derived from hepatitis B virus and comprising
PT one or more binding arms, useful for treating hepatitis and cirrhosis.
XX
PS Disclosure; SEQ ID NO 655; 122pp; English.
XX
XX The invention relates to an enzymatic nucleic acid molecule that
CC specifically cleaves RNA derived from hepatitis B virus (HBV) and
CC comprising one or more binding arms, without requiring the presence of a
CC 2'-OH group within the molecule for activity. The nucleic acids are
CC useful for treating hepatitis B virus infection, hepatitis,
CC hepatocellular carcinoma, cirrhosis and liver failure, either alone or in
CC combination with other therapies such as lamivudine and interferons. The
CC nucleic acids are useful as diagnostic tools to examine genetic drift and
CC mutations within diseased cells, for detecting the presence of HBV RNA in
CC a cell, for the study of RNA and for down-regulating gene expression of
CC target genes in bacterial, fungal, viral, plant or mammalian cells. This
CC sequence represents an HBV RNA target sequence, used in the scope of the
CC invention. Note: The sequence data for this patent is also available in
CC electronic format from USPTO at seqdata.uspto.gov/sequence.html.

 XX PT Novel enzymatic nucleic acids, ribozymes, which modulate expression of
 XX PT genes encoding vascular endothelial growth factor and/or VEGF receptor,
 XX PT useful for inhibiting tumor angiogenesis in cell, and for treating
 XX PT cancer.
 XX PS Disclosure; SEQ ID NO 892; 172pp; English.
 XX CC The invention relates to enzymatic nucleic acids (I) i.e.
 CC CC ribozymes/DNAzymes/Zinzymes that target and modulate expression of, genes
 CC CC encoding vascular endothelial growth factor (VEGF) and/or VEGF receptor
 CC CC (VEGFR1 and 2 encode by the Flt-1 and Kdr genes respectively). Also
 CC CC included are a composition comprising (I) and a carrier, administering
 CC CC (I) to a cell (by contacting the cell with the compound under conditions
 CC CC suitable for the administration), administering (I) to a cell (in
 CC CC conjunction with one or more other drug by contacting the cell with the
 CC CC compound and the other drug under conditions suitable for the
 CC CC administration), administering (I) to a mammal (by contacting the mammal
 CC CC with the compound under conditions suitable for the administration),
 CC CC treating (M1) a subject having endometriosis (by contacting a subject
 CC CC with, or administering to subject, a nucleic acid molecule (I1) that
 CC CC modulates expression of VEGF, VEGFR1, and/or VEGFR2), a mammalian cell
 CC CC (I11) comprising (I) and administering to a mammal (I) (in conjunction
 CC CC with a chemotherapeutic agent comprising contacting the mammal with the
 CC CC compound and the chemotherapeutic agent under conditions suitable for the
 CC CC administration). (I) is administered to a mammalian cell, preferably
 CC CC human cell in the presence of a delivery reagent which is a lipid such as
 CC CC cationic lipid or phospholipid, or a liposome. The enzymatic nucleic acid
 CC CC molecule has an endonuclease activity to cleave RNA encoded by an VEGFR1
 CC CC and/or VEGFR2 gene, and is in a hammerhead, inozyme, DNAzyme, G-cleaver,
 CC CC or Ambazyme configuration. The enzymatic nucleic acids are useful for
 CC CC inhibiting ocular angiogenesis associated with diabetic retinopathy or
 CC CC age-related diabetic retinopathy, in a subject. They are also useful for
 CC CC inhibiting angiogenesis, preferably tumor angiogenesis in cell, and for
 CC CC treating a subject having a condition associated with an increased level
 CC CC of VEGF receptor, where the condition is cancer, e.g. breast cancer, lung
 CC CC cancer (such as non-small cell lung carcinoma), colorectal cancer, renal
 CC CC cancer (such as renal cell carcinoma), pancreatic cancer. The enzymatic
 CC CC nucleic acids are useful for treating a subject (preferably human) having
 CC CC endometriosis, psoriasis, age-related macular degeneration, proliferative
 CC CC diabetic retinopathy, hypoxia-induced angiogenesis, rheumatoid arthritis,
 CC CC wound healing, endometrial carcinoma, gynecologic bleeding disorders,

CC irregular menstrual cycles, ovulation, premenstrual syndrome, and
 CC CC menopausal dysfunction. The enzymatic nucleic acids are useful for birth
 CC CC control by inhibiting ovulation or embryonic uterine implantation. The
 CC CC present sequence is a target sequence from the human VEGFR1/Flt-1 mRNA.

 PT LAMP nucleic acid amplification primers for detection of cytokeratin
 PT expression as indicator in diagnosis of tumour metastasis.
 XX
 PS Claim 3; SEQ ID NO 192; 266pp; Japanese.
 XX
 XX CC The invention relates to novel nucleic acid amplification primers for the
 CC CC detection of human cytokeratin (CK) 18, 19 or 20 expression by the LAMP
 CC CC (loop mediated isothermal amplification) method. The primers of the
 CC CC invention may be useful for the detecting cytokeratin 18-20 expression as
 CC CC an indicator for the diagnosis of tumour metastasis, particularly
 CC CC prostate cancer and lymphoma. The amplification using the primers is
 CC CC highly efficient and allows very sensitive detection of tumour
 CC CC metastasis. The current sequence is that of the human CK18-related PCR
 CC CC primer of the invention.

PT New isolated nucleic acid, useful for treating viral diseases associated
PT with tumors and cell degeneration, also related polypeptides, antibodies
PT and transfected cells.

PS Disclosure; SEQ ID NO 2200; 30pp; French.

XX This invention relates to novel isolated nucleic acid sequences involved
CC in the phenomena of tumour suppression, tumour reversion, apoptosis
CC and/or resistance to viruses. The invention may be useful for the
CC development of compounds with a cytostatic, virucide, neuroprotective,
CC nootropic or neuroleptic activity. The DNA sequences may be useful as
CC probes and primers for detecting, identifying, quantifying and/or
CC amplifying nucleic acid, for example as one component of a gene chip, in
CC vitro as antisense reagents and for production of recombinant
CC polypeptides. The invention may therefore be useful for preparation of
CC pharmaceuticals for prevention and/or treatment of viral diseases that
CC are characterised by development of tumours or cell degeneration,
CC specifically cancer but also Alzheimer's disease and schizophrenia. The
CC present sequence is that of a nucleic acid sequence of the invention.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/publishedpct_sequences

PT receptor or Salpha reductase.

PS Example 1; Page 18; 36pp; German.

XX This invention describes a novel method for treatment of acne and
CC acneform skin disorders, including rosacea, using a non-viral active
CC agent, prepared by molecular biological methods. The method comprises an
CC antisense oligonucleotide; (stabilised) ribozyme; (mirror) aptamer;
CC chimeric RNA/DNA oligonucleotide; naked plasmid DNA or DNA encapsulated
CC in a liposome, especially an antisense oligonucleotide specific for a
CC gene that encodes a steroid hormone receptor or steroid hormone
CC metabolising enzyme, particularly the androgen receptor and/or Salpha-
CC reductase. The products of the invention have dermatological and
CC antiestrogenic activity and can inhibit the androgen-induced stimulation
CC of sebaceous gland activity. The method of the invention provides
CC difficulties associated with reduced side effects and without the
CC represents a RT-PCR primer used to amplify the beta-actin gene, which is
CC used as a control during the amplification of the human androgen receptor
CC described in the disclosure of the invention

PT disorders associated with aberrant expression or activity of human
PT NHEPL1.
XX XX
PS Example 2; SEQ ID NO 600; 468bp; English.
XX XX
CC The invention relates to a nucleic acid molecule which encodes a Na+/H+
CC exchanger like protein (NHEPL1). The NHEPL1 nucleic acid molecule, NHEPL1
CC polypeptide, an antibody against the protein or its antigen-binding
CC fragment is useful in therapy. The NHEPL1 nucleic acid molecule, NHEPL1
CC polypeptide and an agonist are particularly useful for manufacturing a
CC medicament for treating or preventing a disorder associated with
CC decreased expression or activity of human NHEPL1. The antibody or its
CC antigen-binding fragment, and an antagonist, are useful for manufacturing
CC a medicament for treating or preventing a disorder associated with
CC increased expression or activity of human NHEPL1. The NHEPL1 nucleic acid
CC or protein is useful as passive replacement therapy, as a vaccine, or in
CC diagnostic methods. This sequence corresponds to a 17-mer oligonucleotide
CC spanning the sequence of the human NHEPL1 gene (ADC03514).

PS
XX The present invention relates to nucleic acid molecules which modulate
CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or
CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense
CC and enzymatic nucleic acids such as hammerhead ribozymes, DNAsymes,
CC inozymes, zincymes, amberzymes, and G-cleaver ribozymes. Also disclosed
CC are nucleic acid decoy molecules and aptamers that bind to HBV reverse
CC transcriptase and/or HBV reverse transcriptase primer sequences, as well
CC as oligonucleotides that specifically bind the Enhancer 1 region of HBV
CC DNA. The nucleic acids may be used to modulate the expression of HBV
CC genes and HBV viral replication. Also disclosed is a method for screening
CC compounds and/or potential therapies directed against HBV, and compounds
CC that modulate the expression and/or replication of HCV. The compounds and
CC methods of the invention are useful for the treatment of degenerative and
CC disease states related to HBV and HCV infection, replication and gene
CC expression such as cirrhosis, liver failure, and hepatocellular
CC carcinoma. The present sequence represents a substrate for one of the HCV
CC DNzyme or minus strand DNzyme sequences disclosed in the present
CC invention

CC The present invention relates to nucleic acid molecules which modulate
CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or
CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense
CC and enzymatic nucleic acids such as hammerhead ribozymes, DNzymes,
CC inozymes, zinzymes, amberyne, and G-cleaver ribozymes. Also disclosed
CC are nucleic acid decoy molecules and aptamers that bind to HBV reverse
CC transcriptase and/or HBV reverse transcriptase primer sequences, as well
CC as oligonucleotides that specifically bind the Enhancer I region of HBV

CC DNA. The nucleic acids may be used to modulate the expression of HBV
CC genes and HBV viral replication. Also disclosed is a method for screening
CC compounds and/or potential therapies directed against HBV, and compounds
CC that modulate the expression and/or replication of HCV. The compounds and
CC methods of the invention are useful for the treatment of degenerative and
CC disease states related to HBV and HCV infection, replication and gene
CC expression such as cirrhosis, liver failure, and hepatocellular
CC carcinoma. The present sequence represents a substrate for one of the HBV
CC ribozyme, inozyme, G-cleaver, zinzyme, DNzyme or amberyne sequences
CC disclosed in the present invention

XX New zinc finger-containing proteins and nucleic acids, useful in

XX manufacturing a medicament for treating or preventing a disorder

XX associated with decreased or increased expression or activity of MD23,

XX MD24, MD27 or MD212, e.g. cancer.

XX Example 8; SEQ ID NO 4571; 103bp; English.

XX The present invention relates to novel human zinc finger-containing

XX proteins and their coding sequences: MD23, MD24, MD27, MD212. MD23 is

XX encoded at chromosome 7q22.1, MD24 is encoded at chromosome 6p21.3-22.2,

XX MD27 is encoded at chromosome 16p11.2 and MD212 is encoded at chromosome

XX 15q26.1. The MD23, MD24, MD27, and MD212 sequences are useful in therapy,

XX or in manufacturing a medicament for treating or preventing a disorder

XX associated with decreased or increased expression or activity of MD23,

XX MD24, MD27, or MD212, e.g. cancer or developmental disorders. The nucleic

XX acids and proteins are also useful for diagnosing or monitoring a disease

XX caused by altered expression of MD23, MD24, MD27, or MD212. The nucleic

XX acids can also be used as probes to detect and characterize gross

XX alterations in MD23, MD24, MD27, or MD212 genetic locus. The probes are

XX useful in constructing microarrays for measuring gene expression. The

XX proteins are useful as therapeutic agents for gene therapy or as

XX vaccines. The present sequence was used to illustrate the invention.

XX Novel short interfering RNA and enzymatic nucleic acid useful for

XX treating cancer, modulates the expression of a nucleic acid encoding

XX HER2, K-Ras, H-Ras, N-Ras, and human deficiency virus sequences.

XX Claim 4; Page 138; 185bp; English.

XX The invention relates to a novel short interfering RNA (siRNA) nucleic

XX acid molecule or an enzymatic nucleic acid molecule, that modulates

XX expression of a nucleic acid molecule encoding HER2, K-Ras, H-Ras, N-Ras,

XX human immunodeficiency virus (HIV) or a component of HIV. The nucleic

XX acid molecule of the invention has cytoskeletal, anti-HIV, and anti-

XX rheumatic activity. The nucleic acid molecules are useful for reducing

XX HER2, K-Ras, H-Ras, and HIV activity in a cell. The nucleic acids are

XX also useful for treating breast, ovarian, colorectal, lung, prostate,

XX bladder, or pancreatic cancer, and HIV infection, and AIDS. The sequences

XX shown in ABZ59889 - ABZ62216, ABZ64544 - ABZ65531, ABZ66520 - ABZ66524,

XX ABZ66530 - ABZ66585 represent substrate/target sequences for the human

XX ribozymes of the invention

 XX Novel enzymatic nucleic acid molecules which down regulates expression of
 PT a sequence encoding a subunit of nuclear factor kappa B useful for
 PT treating cancer, inflammatory disorders and autoimmune diseases.
 XX
 XX Claim 3; Page 32; 72pp; English.
 PS
 XX The invention describes an enzymatic nucleic acid molecule (I) which down
 CC regulates expression of a sequence encoding a subunit of nuclear factor
 CC kappa B (NFKB), where (I) is an inozyme, zinzyme, G-cleaver or amberyze
 CC configuration. The enzymatic nucleic acid molecule is adapted to treat
 CC cancer and is useful for down-regulating RBL-A activity in a cell, for
 CC treating a patient having a condition associated with the level of RBL-A.
 CC (I) is useful for cleaving RNA comprising a sequence of RBL-A gene, in
 CC the presence of a divalent cation, especially Mg²⁺. The enzymatic and
 CC antisense nucleic acid molecules are useful for treating breast, lung,
 CC prostate, colorectal, brain, oesophageal, stomach, bladder, pancreatic,
 CC cervical, head and neck, ovarian cancer, melanoma, lymphoma, glioma or
 CC multidrug resistant cancer. The method involves use of other drug
 CC therapies such as monoclonal antibodies, RBL-A-specific inhibitors or
 CC chemotherapy including paclitaxel, docetaxel, cisplatin, methotrexate,
 CC cyclophosphamide, doxorubicin, fluorouracil carboplatin, edatrexate,
 CC gemcitabine or radiation therapy. The enzymatic and antisense nucleic
 CC acid molecules are also useful for treating inflammatory disease such as
 CC rheumatoid arthritis, restenosis, asthma, Crohn's disease, diabetes,
 CC obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft
 CC rejection, gene therapy applications, ischemia/reperfusion injury
 CC (central nervous system (CNS) and myocardial), glomerulonephritis,
 CC sepsis, allergic airway inflammation, inflammatory bowel disease or
 CC infection. This sequence represents the substrate of a novel enzymatic
 CC nucleic acid molecule

Blatt L, Mcswigen JA;

WPI; 2002-706994/76.

New nucleic acid molecule that modulates replication of West Nile Virus
 (WNV), useful for treating a condition related to WNV infection e.g.
 pancreatitis, meningitis, hepatocellular carcinoma or cirrhosis.

Claim 23; SEQ ID NO 4257; 495bp; English.

The invention relates to nucleic acid molecules that modulate replication
 of the West Nile Virus (WNV). The nucleic acid molecules are useful for
 treating a condition related to WNV infection e.g. pancreatitis,
 encephalitis, myocarditis, meningitis, neurologic infection, hepatitis,
 liver failure, hepatocellular carcinoma or cirrhosis. The nucleic acid
 molecule is selected from the group of ribozymes consisting of
 Hammerhead, Inozyme, G-cleaver, DNazyme, Amberzyme and Zinzyme. The
 nucleic acid molecules further comprise at least five ribose residues, at
 CC least ten 2'-O-methyl modifications, phosphorothioate linkages on at
 CC least three of the 5' terminal nucleotides and a 3' end modification of a
 CC 3'-3' inverted abasic moiety. Nucleic acid molecules SEQ ID NO 1 to 37080
 CC are claimed; however, SEQ ID NO 2194-2206 and 17502-17514 are not given
 CC in the specification. The present sequence is that of a nucleic acid
 CC molecule of the invention

 XX
 PS Claim 4; Page 88; 152pp; English.
 XX
 CC The invention relates to enzymatic nucleic acid molecules that down
 CC regulate expression of chloride channel calcium activated 1 (ClCA1) genes
 CC by cleaving RNA derived from the genes. The nucleic acid sequences are
 CC useful as pharmaceutical agents for treating conditions such as chronic
 CC obstructive pulmonary disease (COPD), chronic bronchitis, asthma, cystic
 CC fibrosis, obstructive bowel syndrome and any other diseases or conditions
 CC that are related to or will respond to the levels of ClCA1 in a cell or
 CC tissue. The sequences are useful for reducing ClCA1 activity in a cell,
 CC hence, are useful for treatment of a patient having a condition
 CC associated with the level of ClCA1, where the invention further comprises
 CC the use of one or more therapies under conditions suitable for the
 CC treatment, for example, oxygen therapy, bronchodilators, corticosteroids,
 CC antibacterials, vaccinations, acetylcysteine and mucokinetic agents. The
 CC nucleic acids of the invention are also used as diagnostic tools to
 CC examine genetic drift and mutations within diseased cells or to detect
 CC the presence of ClCA1 RNA in a cell. This sequence represents an
 CC enzymatic nucleic acid molecule of the invention

PT New isolated nucleic acid encoding an isoform of human pregnancy
XX associated plasma protein E, for preventing or aborting pregnancy.
XX
PS Example 2; Page 158; 353pp; English.
XX
CC This invention describes a novel isolated nucleic acid that encodes one
XX of three new isoforms of human pregnancy associated plasma protein E,
XX hPAP-E. The products of the invention have abortive and contraceptive
XX activity and can be used for gene therapy or in a vaccine. The nucleic
XX acid, polypeptide encoded by it, or antibody to the polypeptide can be
XX used in pharmaceutical compositions or vaccines for preventing or
XX aborting pregnancy. PAP-E is used in the antenatal diagnosis of
XX dysgenetic pregnancies. The nucleic acids are used as probes to assess
XX the level of PAP-E isoform mRNA in chorionic villus samples, and the
XX antibodies can be used to assess the expression levels of PAP-E isoform
XX proteins in chorionic villus samples, to diagnose dysgenetic pregnancies
XX antenatally. This sequence represents an oligomer used in scanning the
XX human PAP-E genes described in the disclosure of the invention

PT Novel human SH3 domain (POSH)-like signaling protein 1 polypeptide, POSHL
PT -1, useful for treating disorders associated with decreased expression or
PT activity of human POSHL1.
XX
PS Example 2; SEQ ID NO 798; 60pp + Sequence Listing; English.
XX
XX The invention relates to an isolated SH3 domain (POSH)-like signalling
XX protein 1 (POSHL 1) polypeptide (I), comprising a sequence of 730 amino
XX acids (SI, ABB83999), a sequence having 65% sequence identity to (S1),
XX (S1) having 95% deviations, especially conservative substitutions or a
XX fragment of the sequences comprising at least 8 contiguous amino acids.
XX Human POSHL 1 is a proto-oncogene/oncogene product that functions as an
XX adaptor protein that interacts with Rho family small GTPases as well as
XX downstream components of the signal transduction pathway. (I) is useful
XX for identifying a specific binding partner. (I) and nucleic acids (II)
XX encoding (I) are useful for diagnosing, monitoring disease and treating
XX caused by altered expression of human POSHL1 including diagnosing and
XX treating cancer, they useful in the development of vaccines and (II) is
XX useful in gene therapy. (II) is useful for constructing microarrays which
XX are useful for measuring and for surveying gene expression and creating
XX transgenic non-human animals capable of producing the proteins. The
XX present sequence is that of a scanning oligonucleotide useful in examples
XX of the invention. Note: The present sequence did not form part of the
XX printed specification, but is based on sequence information supplied to
XX Derwent by the European Patent Office

 XX
 PT New polypeptide, for raising antibodies that recognize hGDMLP-1 proteins,
 PT or as specific biomolecule capture probes for surface-enhanced laser
 PT desorption/ionization, comprises human myosin-like protein hGDMLP-1.
 XX
 PS Disclosure; SEQ ID NO 2301; 214pp; English.
 XX
 CC The present invention describes a human genome-derived myosin-like
 CC protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-
 CC 1 can be used in gene therapy and vaccine production. The hGDMLP-1
 CC nucleic acids can be used as probes to detect, characterize and quantify
 CC hGDMLP-1 nucleic acids in samples, as amplification substrates, to
 CC provide initial substrates for the recombinant engineering of hGDMLP-1
 CC protein variants having desired phenotypic improvements, and for
 CC expressing the proteins. The hGDMLP-1 proteins or polypeptides may be
 CC used as immunogens to raise antibodies that specifically recognise hGDMLP
 CC -1 proteins, as standards in assays used to determine the concentration
 CC and/or amount specifically of hGDMLP proteins, as specific biomolecule
 CC capture probes for surface-enhanced laser desorption/ionization, as
 CC therapeutic supplement in patients having specific deficiency in hGDMLP-1
 CC production, and in vaccines or for replacement therapy. The
 CC polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a
 CC disorder associated with the expression of hGDMLP-1, in particular heart
 CC and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.
 CC The present sequence represents an oligomer used in the screening of the
 CC hGDMLP-1 sequence in the exemplification of the present invention. N.B.
 CC The sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequence

 PT New human kidney tumor overexpressed membrane (KTOM1) protein and nucleic
 PT acids encoding the protein, useful for treating subjects having defects
 PT in KTOM1 which can manifest as cancer of the kidney, or as a disorder of
 PT e.g., liver or bone.
 XX
 PS Example 2; Page 277; 418pp; English.
 XX
 CC The invention relates to a novel isolated nucleic acid encoding human
 CC KTOM1 (kidney tumour overexpressed membrane) protein. The protein of the
 CC invention has cytoskeletal activity. The nucleotide may have a use in gene
 CC therapy. The KTOM1 nucleic acids may be used to diagnose, treat or
 CC monitor a disease caused by altered expression of human KTOM1.
 CC Compositions comprising the nucleic acids, proteins or antibodies may be
 CC used to treat subjects having defects in KTOM1 which can manifest as
 CC cancer of the kidney, as well as a disorder of liver, bone marrow, brain,
 CC heart, lung, kidney, colon, skeletal muscle, testis, uterus and placenta
 CC function. The sequence represents a probe used in the invention to scan
 CC the nt 1-1001 portion of human KTOM1a (AB063232)

CC molecules (e.g. ribozymes) to modulate gene expression. The invention
CC also methods for their use to down regulate or inhibit the expression of
CC gene encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine
CC aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C
CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
CC nucleic acid molecules used to inhibit the expression of the said genes
CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
CC zincyme, and/or DNAzyme motifs. The methods of the invention are useful
CC for treating cancer, in particular breast cancer, Alzheimer's disease,
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC diseases, hepatitis B infections, and hepatitis and hepatocellular
CC carcinoma. The enzymatic nucleic acid molecules can also be used as
CC diagnostic tools to examine genetic drift and mutations within diseased
CC cells and to detect the presence of specific RNA in a cell. The present
CC sequence represents a substrate/target sequence for a DNAzyme used in the
CC examples of the present invention. Note: Some SEQ ID Nos are repeated
CC more than once in the specification, but these have different sequences
CC associated with them.

XX Example 6; Page 513; 717pp; English.

CC The present invention relates to the use of enzymatic nucleic acid
CC molecules (e.g. ribozymes) to modulate gene expression. The invention of
CC also methods for their use to down regulate or inhibit the expression of
CC genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine
CC aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C
CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
CC receptor-2 (HER2/c-erbB2/neu), phospholamban (PLN), presenilin-1 (ps-1),
CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
CC nucleic acid molecules used to inhibit the expression of the said genes
CC include hammerhead (HH), hairpin, NCH (inosyme), G-cleaver, amberyzyme,
CC zinzyme, and/or DNAzyme motifs. The methods of the invention are useful
CC for treating cancer, in particular breast cancer, Alzheimer's disease,
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC diseases, hepatitis B infections, and hepatitis and hepatocellular
CC carcinoma. The enzymatic nucleic acid molecules can also be used as
CC diagnostic tools to examine genetic drift and mutations within diseased
CC cells and to detect the presence of specific RNA in a cell. The present
CC sequence represents a substrate/target sequence for a ribozyme used in
CC the examples of the present invention. Note: Some SEQ ID Nos are repeated
CC more than once in the specification, but these have different sequences
CC associated with them.

XX
PS Claim 4; Page 134; 218pp; English.
XX
CC The present invention describes nucleic acid molecules which modulate the
CC synthesis, expression and/or stability of a mRNA encoding 1 or more
CC receptors of vascular endothelial growth factor (VEGF). A patient
CC (preferably human) having a condition associated with the level of the
CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing
CC receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour
CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be
CC treated by administering the nucleic acid molecule or the expression
CC vector to the patient. AAX67275 to AAX75752 represent specific examples
CC of nucleic acid molecules from the present invention

DR Enzymatic nucleic acids - which cleave RNA derived from an epidermal
XX growth factor receptor, useful for inhibiting cell proliferation and for
XX treating cancers.
XX
PS Claim 5; Page 73; 109pp; English.
XX
CC The present invention describes enzymatic nucleic acid molecules (NAs)

CC which specifically cleave RNA derived from an epidermal growth factor
CC receptor (EGF-R) gene. AAV97221 to AAV98043 and AAV98979 to AAV99090
CC represent specifically claimed target sequence from human EGF-R. AAV98044
CC to AAV98866 and AAV98867 to V9878 represent hammerhead ribozymes and
CC hairpin ribozymes respectively for human EGF-R. The NAs are useful for
CC cleaving EGF-R RNA in the treatment of a condition associated with EGFR
CC expression levels e.g. to inhibit cell proliferation in the prevention or
CC treatment of cancers. The NAs can also be used as diagnostic tools to
CC examine genetic drift and mutations within diseased cells or to detect
CC the presence of EGF-R RNA in a cell

XX
PS A method has been developed for detecting the presence or absence of a
XX single nucleotide polymorphism (SNP) allele in a genomic sample. The
XX method comprises preparing a reduced complexity genome (RCG) from the
XX genomic sample and analysing the RCG for the presence or absence of a SNP
XX allele. The method can be used to characterise a tumour, to generate a
XX genomic pattern for an individual genome or to generate a genomic
XX classification code for a genome. The method can be used to assess
XX whether a subject is at risk for developing a disease or to identify a
XX set of SNP alleles associated with a disease. The method can also be used
XX to perform linkage analysis. AAA35944 to AAA35947 represent sequences
XX used in the exemplification of the present invention. AAA35948 to
XX AAA36632 represent nucleotide sequences containing SNPs

PT	tissue for e.g. transplantation(s) and identifying individuals or disease	
PS	susceptibility.	
XX		
PS	Disclosure; SEQ ID NO 39; 80pp; English.	
XX		
CC	The invention relates to a pair of oligonucleotide (ON) primers for	
CC	amplifying the exon 1-2 region of the HLA-A locus (human leukocyte	
CC	antigen A), where the pair of primers consists of ONs, RAP1007 and DB337	
CC	(appearing as ADG76495 and ADG76496). Also included is a method for	
CC	amplifying a region of the HLA-A locus containing the first and second	
CC	exons, which consists of carrying out a PCR using the above primers. Also	
CC	disclosed are HLA-A genotyping probes for exon 2 and 3 and HLA-A allele	
CC	DNA/protein sequences. The method is used for typing HLA Class I A locus	
CC	nucleic acids for typing tissue for transplantation, determining	
CC	individual identity and identifying disease susceptible individuals e.g.	
CC	graft-versus-host disease. The method provides a rapid and precise system	
CC	for genotyping the alleles of the HLA-A locus, including those that	
CC	cannot be distinguished by serological methods. The present sequence is	
CC	an HLA-A genotyping probe of the invention. Note: The disclosure states	
CC	that the primers amplify exons 2 and 3, not 1 and 2 as stated in the	
CC	claims.

PT with tumors and cell degeneration, also related polypeptides, antibodies
PT and transfected cells.
XX
PS Disclosure; Page 195; 720pp; French.

XX
SQ The invention relates to a novel isolated 17 mer nucleic acid sequence,
CC given in the specification, a sequence containing at least 15 consecutive
CC nucleotides from the 17 mer sequence, a sequence with, after optimal
CC alignment, at least 80 % identity to the 17 mer sequence, a sequence that
CC hybridizes to them under highly stringent conditions, or the complement
CC of any of them, or the corresponding RNA. The novel isolated nucleic
CC acids of the invention are useful as probes and primers for detecting,
CC identifying, quantifying and/or amplifying a nucleic acid, e.g. as one
CC component of a gene chip, in vitro as (anti)sense reagents, and for
CC production of recombinant polypeptides. Any of the nucleic acids,
CC polypeptides, vectors containing the nucleic acids, cells containing the
CC vector or antibodies directed against the polypeptides are useful for
CC preparation of pharmaceuticals for prevention and/or treatment of viral
CC diseases that are characterised by development of tumours or cell

CC degeneration, specifically cancer but also Alzheimer's disease and
CC schizophrenia. Analysis of the expression of the 17 mer nucleic acids in
CC patient samples is useful for diagnosis and/or prognosis of these
CC diseases. The polypeptides can also be used to generate antibodies, and
CC both the polypeptide and antibodies are useful as components of protein
CC chips. The nucleic acid sequences of the invention can be used in gene
CC therapy. This polynucleotide sequence represents a tumour suppression
CC related human fukutin oligonucleotide of the invention

PT Genotyping blood cell antigens, by amplifying and detectably labeling DNA by multiplex PCR at region of locus of blood cell antigen containing PT nucleotide polymorphism, determining genotype for blood cell antigens using chimeric primers.

XX Claim 13; SEQ ID NO 82; 80bp; English.

CC The invention relates to genotyping (M1) blood cell antigens, comprising CC detecting DNA from the individual to a multiplex PCR to amplify (and CC detectably label) a region of the locus of different blood cell antigens CC containing the site of a nucleotide polymorphism) arranged in an array) CC and using the amplified and labeled DNA fragments to determine the CC genotype for each of the blood cell antigens, using a pair of blood cell CC antigen-specific chimeric primers and a detectably labeled universal CC primer. Also included are a kit (I) for genotyping blood cell antigens by CC (M1) (comprising a pair of blood cell antigen-specific chimeric primers CC for each blood cell antigen to be genotyped and a detectably labeled CC universal primer, preferably a pair of detectably labeled universal CC primers), a set of blood cell antigen-specific chimeric primer pairs CC useful in a multiplex PCR (comprising at least two, preferably CC substantially all of chimeric primers) and a set of blood cell antigen CC allele-specific oligonucleotide probes useful for genotyping blood cell CC antigens. (M1) enables genotyping of large number of blood cell antigens CC and is a practical, rapid and reliable method for analyzing the CC hybridization results to assign the clinically relevant blood cell CC antigen genotypes. The present sequence is a blood group antigen specific CC probe useful in the method of the invention.

PT New oligonucleotides, useful for tagging restriction fragments for genetic diagnosis.

XX Example 1G; Page 12; 42pp; English.

CC This invention describes a novel oligonucleotide (I) comprising an CC adapter sequence and part of the target sequence of a restriction CC endonuclease, and which has 1-10 selected nucleotides immediately CC adjacent to the 3' end of the target sequence. The products of the CC invention are used to tag restriction fragments which are to be amplified CC by the polymerase chain reaction (PCR). This technique may be used in the CC detection of restriction fragment polymorphisms (RFPs), including length CC polymorphisms. The products can also be used for genetic analysis, such CC as for the forensic typing of humans and the detection of the inheritance CC of determined traits in animals or plants and to monitor several diseases CC at once. The oligonucleotides and kits may also be used to identify CC species, races or varieties of animals or plants. The new adapters, CC oligonucleotides and methods for using them are more sensitive for CC detecting restriction fragment polymorphisms because not only differences CC in the target sites of the restriction endonuclease are detected as with CC prior art methods and oligonucleotides but also differences in the CC adjacent nucleotide sequences within the selective PCR primers. Multiplex CC PCR may only be used to monitor 5-8 different traits simultaneously and CC compromise conditions have to be established to allow all primer pairs to CC yield detectable products. In addition there are strong differences in CC the efficiency of amplification of different fragments and products of CC certain primer pairs are not detectable with multiplex PCR. In contrast, CC using the new techniques, all the primers have a substantial part of CC their nucleotide sequence in common and by selecting Amplified Fragment CC length Polymorphisms, the DNA markers are amplified with equal CC efficiency. AAZ44475-244526 represent primers used to illustrate the CC method of the invention

 DR
 XX Identifying a candidate polymorphic repeat within a coding sequence, for
 PT understanding or treating genetic disease, comprises detecting tandem
 PT repeats in a target coding sequence and scoring the repeats for
 PT polymorphic probability.
 XX
 PS Example; Col 1089, 588pp; English.
 XX
 CC The invention discloses a method for identifying a candidate polymorphic
 CC repeat within a coding sequence (expressed sequence tag, EST), which
 CC comprises detecting tandem repeats in a target coding sequence, scoring
 CC the repeats for polymorphic probability and generating a dataset
 CC correlating the repeats with polymorphic probability to identify a
 CC candidate polymorphic repeat. The computational methods (polymorphic
 CC marker prediction of ubiquitous simple sequences, POMPOS, and Rep-X) are
 CC useful for identifying and detecting candidate polymorphic repeats in
 CC human genes, which can be used to understand, treat or eliminate genetic
 CC diseases, predispositions or adverse drug-treatment reactions. Examples
 CC of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
 CC syndrome, Huntington's disease, fragile-X syndrome, Friedrich's ataxia,
 CC myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and
 CC spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
 CC the polymorphic repeats identified for a search of human ESTs

 PT Direct comparison of numerical gene expression values between samples of
 PT genes comprises using multiplex standardized reverse transcription-
 PT polymerase chain reaction.

XX
 PS Example 1; SEQ ID NO 43; 59pp; English.
 XX
 CC The present invention relates to a method for the direct comparison of
 CC numerical gene expression values between samples of genes. The method
 CC comprises amplifying cDNA in the presence of a competitive template
 CC mixture and primer pairs for several genes and then amplifying aliquots
 CC of the PCR products using a primer pair specific for each gene. The
 CC method of amplification is by multiplex standardised reverse
 CC transcriptase-polymerase chain reaction (Start-PCR). High density
 CC oligonucleotide or cDNA arrays are used to measure PCR products following
 CC quantitative Start-PCR. The method is useful for the assessment of gene
 CC expression in small biological samples such as fine needle aspirate
 CC biopsies, and laser captured microdissected materials. The method allows
 CC for the standardised measurement of hundreds of genes from the same
 CC sample, which in prior art, could only be assessed for one gene. The
 CC present sequence represents a multiplex Start-PCR primer which can be
 CC used in the method of the present invention.

XX isoforms for identifying an agent that inhibits CD-40 mediated cellular
XX signaling and for inhibiting e.g. rheumatoid arthritis and diabetes
XX mellitus.

XX PS Example 2; Fig 14; 170pp; English.

XX The present sequence is the 5' splice donor site of exon 2 of the gene
XX encoding tumour necrosis factor receptor (TNF)-associated factor 3 (TRAF-
XX 3). A number of TRAF-3 mRNA species have been identified and some of
XX these arise as a result of alternative mRNA splicing. TRAF-3 isoforms,
XX including delta130 and delta221 TRAF-3 deletion isoforms, are useful for
XX inhibiting activation of a CD40 ligand on a wide range of cells including
XX B cells, fibroblasts, endothelial cells, epithelial cells, T cells,
XX basophils, macrophages, Reed-Steinberg cells, dendritic cells, renal
XX cells or smooth muscle cells expressing CD40 on the cell surface. The
XX proteins are also useful for treating conditions associated with CD40-
XX mediated intracellular signaling, such as organ rejection as a result of
XX transplantation or an immune response after receiving gene therapy. It
XX may be useful for treating an CD40-dependent immune response in patients
XX suffering from an autoimmune disease such as rheumatoid arthritis,
XX myasthenia gravis, systemic lupus erythematosus, Grave's disease,
XX idiopathic thrombocytopenia purpura, haemolytic anaemia, diabetes
XX mellitus, a drug-induced autoimmune disease (drug-induced lupus),
XX psoriasis or hyper immunoglobulin (IgE) syndrome. The proteins may also
XX be used to treat an immune response associated with an infectious disease
XX such as Reiter's syndrome, spondylarthritis, Lyme disease, human
XX immunodeficiency virus (HIV) infection, syphilis or tuberculosis. They
XX may be used to treat an allergic response, atherosclerosis, reperfusion
XX injury and chronic inflammatory autoimmune diseases such as vasculitis,

XX Novel enzymatic nucleic acid molecule such as DNAszymes and inozymes
 XX specifically cleaving RNA derived from hepatitis B virus and comprising
 XX one or more binding arms, useful for treating hepatitis and cirrhosis.

PS Disclosure; SEQ ID NO 1806; 122pp; English.

XX The invention relates to an enzymatic nucleic acid molecule that
 XX specifically cleaves RNA derived from hepatitis B virus (HBV) and
 XX comprising one or more binding arms, without requiring the presence of a
 XX 2'-OH group within the molecule for activity. The nucleic acids are
 XX useful for treating hepatitis B virus infection, hepatitis,
 XX hepatocellular carcinoma, cirrhosis and liver failure, either alone or in
 XX combination with other therapies such as lamivudine and interferons. The
 XX nucleic acids are useful as diagnostic tools to examine genetic drift and
 XX mutations within diseased cells, for detecting the presence of HBV RNA in
 XX a cell, for the study of RNA and for down-regulating gene expression of
 XX target genes in bacterial, fungal, viral, plant or mammalian cells. This
 XX sequence represents an HBV RNA target sequence, used in the scope of the
 XX invention. Note: The sequence data for this patent is also available in
 XX electronic format from USPTO at seqdata.uspto.gov/sequence.html.

XX Novel compound useful for treating cirrhosis, liver failure,
XX hepatocellular carcinoma, or condition associated with hepatitis C virus
XX infection.

XX Example 1; Page 175; 387P; English.

CC The present invention relates to nucleic acid molecules which modulate
CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or
CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense
CC and enzymatic nucleic acids such as hammerhead ribozymes, DNazymes,
CC inozymes, zinzymes, amberzemes, and G-cleaver ribozymes. Also disclosed
CC are nucleic acid decoy molecules and aptamers that bind to HBV reverse
CC transcriptase and/or HBV reverse transcriptase primer sequences, as well
CC as oligonucleotides that specifically bind the Enhancer I region of HBV
CC DNA. The nucleic acids may be used to modulate the expression of HBV
CC genes and HBV viral replication. Also disclosed is a method for screening
CC compounds and/or potential therapies directed against HBV, and compounds
CC that modulate the expression and/or replication of HCV. The compounds and
CC methods of the invention are useful for the treatment of degenerative and
CC disease states related to HBV and HCV infection, replication and gene
CC expression such as cirrhosis, liver failure, and hepatocellular
CC carcinoma. The present sequence represents a substrate for one of the HBV
CC ribozyme, inozyme, G-cleaver, zinzyme, DNazyme or amberzyme sequences

 XX diseases, hepatitis B infections, and hepatitis and hepatocellular
 XX carcinoma. The enzymatic nucleic acid molecules can also be used as
 XX diagnostic tools to examine genetic drift and mutations within diseased
 XX cells and to detect the presence of specific RNA in a cell. The present
 XX sequence represents a substrate for a ribozyme used in the examples of
 XX the present invention. Note: Some SEQ ID Nos are repeated more than once
 XX in the specification, but these have different sequences associated with

CC gene cluster ORFs are useful for chemically modifying a molecule in a
CC host cell. The host cell is a bacterium or eukaryotic cell, including a
CC mammalian, yeast, plant, fungal, or insect cell. The molecule is an
CC endogenous metabolite produced by the host cell or exogenously supplied
CC metabolite, or an amino acid, and the polypeptide is a peptide synthetase
CC or amino transferase. The polypeptides encoded by the lmm gene cluster
CC are useful for converting an auto-carrier protein to a holo-carrier
CC protein. lmm shows potent antitumour activity in tumour models in vivo.
CC The lmm gene cluster modules and/or catalytic domains are useful for
CC making various peptide and/or polypeptide, and/or hybrid
CC polypeptide/polypeptide metabolites. The proteins encoded by the ORFs are
CC useful alone, or in combination with other active domains to modify
CC various target substrates. The lmm gene cluster is useful to upregulate
CC endogenous lmm production to permit lmm production in cells and/or to
CC make various modified lmm. lmm, its analogue, or other polypeptide,
CC peptide or hybrid polypeptide/peptide metabolites are useful as
CC therapeutic agents, to treat a number of disorders, depending upon the
CC type of metabolites. ABX34290-ABX34431 represent PCR primers used to
CC amplify individual ORFs of the S. atroolivaceus leinamycin biosynthesis
CC gene cluster

PT Detecting retroviral DNA using labelled oligo:nucleotide(s) - which bind
PT to the primer binding site of a retroviral genome, useful as sequence
PT tag.
XX
PS Claim 2; Page 27; 39pp; English.
XX
XX The human genome is thought to contain around 1300 transfer RNA (tRNA)
CC genes and pseudogenes encoding 60-90 tRNAs. Of these, 20 have been
CC sequenced and 11 tRNA sequences have been shown to act as primers for
CC synthesising the (-)-strand of retroviruses by reverse transcriptase.
CC Sequences AAT92025-48 are sense primers identical to primer binding site
CC (PBS) sequences found in retroviral sequences, which are complementary to
CC the last 18 nucleotides of tRNA gene sequences. This sequence is derived
CC from known exogenous or endogenous retroviral sequences. They may also be
CC used to detect novel retroviruses or endogenous retroviral sequences
CC found in the human genomes. Endogenous retroviral sequences may serve as
CC useful tags in animal evolutionary studies and breeding programmes and,
CC potentially, in forensic sciences

 XX
 PT Antisense inhibition of human G-alpha-12 expression.
 XX
 PS Example 15; Col 38; 36pp; English.
 CC This is a human G-alpha-12 antisense nucleotide sequence. G-alpha-12 is a
 CC member of the G12/13 subfamily of G-proteins. The primary function of G-

CC alpha-12 is in cell differentiation and growth. The invention relates to
 CC antisense compounds which are 8-30 nucleotides long (see AA257686-
 CC 257746). The antisense molecules are targeted to the human G-alpha-12
 CC nucleic acid molecule, and inhibit the expression of G-alpha-12. The
 CC molecules preferably have a modified internucleotide linkage, and at
 CC least one modified sugar moiety. The compounds target different regions
 CC of the human G-alpha-12 RNA. The expression of human G-alpha 12 is
 CC inhibited by contacting human cells or tissues in vitro with the
 CC antisense molecules. The oligonucleotides are used in modulating the
 CC function of nucleic acid molecules encoding G-alpha-12, ultimately
 CC modulating the amount of G-alpha-12 produced. The antisense compounds can
 CC be utilized for diagnostics, therapeutics, prophylaxis and as research
 CC agents and kits. They may be useful in the treatment of cancer, and
 CC metastatic growth

 PT Novel polymorphic variant of reference sequence for human cholinergic
 PT receptor, muscarinic 3 gene, useful for diagnostic and therapeutic
 PT purposes.
 XX
 PS Claim 15; Page 19; 54pp; English.
 XX
 CC The patent relates to polymorphic variants of human cholinergic receptor,
 CC muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
 CC single nucleotide polymorphism selected from cytosine at P51, adenine at
 CC P52 or P53, and cytosine at P54. The invention also relates to a method
 CC for genotyping and haplotyping the CHRM3 gene for identification of
 CC variants. The polymorphic variant is useful for therapeutic purposes, for
 CC studying the expression and biological function of CHRM3, as well as for
 CC developing drugs targeting the CHRM3 protein. The variant is also useful
 CC in diagnostics and forensic applications. The recombinant nonhuman
 CC organism transfected with the polymorphic variant is useful for studying
 CC expression of CHRM3 isogenes in vivo, for in vivo screening and testing
 CC of drugs targeted against CHRM3 protein, and for testing the efficacy of
 CC therapeutic agents and compounds for Alzheimer's disease, Sjogren's
 CC syndrome, disorders associated with smooth muscle contractility and
 CC sudden infant death syndrome. The CHRM3 protein variant is useful in drug
 CC screening assays and its antibodies are useful in immunoassays to detect
 CC CHRM3 protein variants in biological samples. The present sequence is an
 CC allele-specific oligonucleotide (ASO) primer used for detecting human
 CC CHRM3 gene polymorphism

 PT New nucleic acids that interact, and optionally cleave, target sequences,
 PT used to treat cancer.
 XX
 PS Claim 77; Page 64; 148pp; English.
 XX
 CC The present invention describes nucleic acids (A) that interact stably
 CC with a target sequence and contain at least one phosphoro(di)thioate
 CC link, having endonuclease activity. (A), and more generally any catalytic
 CC nucleic acid (A') that modulates expression of the oestrogen receptor
 CC gene, are used to treat cancer (particularly of breast or endometrium),
 CC in vivo or by transforming cells ex vivo and implanting treated cells, or
 CC for other conditions associated with levels of oestrogen receptor.
 CC Because of the high selectivity for targeted RNA, (A) can also be used to
 CC correlate inhibition of gene expression with alterations in phenotype,
 CC particularly for identification of therapeutic targets, and as research
 CC reagents (for RNA, in the same way that restriction endonucleases are
 CC used with DNA). The combination of modifications in (A) improves
 CC resistance to nucleases, binding affinity and/or activity. AAA23503 to
 CC AAA27747 represent oestrogen receptor hammerhead ribozyme sequences, and
 CC AAA24748 to AAA25592 represent their corresponding target sequences.
 CC AAA25993 to AAA26105 represent oestrogen receptor hairpin ribozyme
 CC sequences, and AAA26107 to AAA26218 represent their corresponding target
 CC sequences. AAA26219 to AAA26271 represent other ribozyme sequences and
 CC antisense oligonucleotides used in the exemplification of the present
 CC invention

 XX Genotyping blood cell antigens, by amplifying and detectably labeling DNA
 PT by multiplex PCR at region of locus of blood cell antigen containing
 PT nucleotide polymorphism, determining genotype for blood cell antigens
 PS using chimeric primers.
 PS Claim 13; SEQ ID NO 88; 80bp; English.
 XX The invention relates to genotyping (M1) blood cell antigens, comprising
 CC subjecting DNA from the individual to a multiplex PCR to amplify (and
 CC detectably label) a region of the locus of different blood cell antigens
 CC containing the site of a nucleotide polymorphism (arranged in an array)
 CC and using the amplified and labeled DNA fragments to determine the
 CC genotype for each of the blood cell antigens, using a pair of blood cell
 CC antigen-specific chimeric primers and a detectably labeled universal
 CC primer. Also included are a kit (I) for genotyping blood cell antigens by
 CC (M1) (comprising a pair of blood cell antigen-specific chimeric primers
 CC for each blood cell antigen to be genotyped and a detectably labeled
 CC universal primer, preferably a pair of detectably labeled universal
 CC primers), a set of blood cell antigen-specific chimeric primer pairs
 CC useful in a multiplex PCR (comprising at least two, preferably
 CC substantially all of chimeric primers) and a set of blood cell antigen
 CC allele-specific oligonucleotide probes useful for genotyping blood cell
 CC antigens. (M1) enables genotyping of large number of blood cell antigens
 CC and is a practical, rapid and reliable method for analyzing the
 CC hybridization results to assign the clinically relevant blood cell
 CC antigen genotypes. The present sequence is a blood group antigen specific
 CC probe useful in the method of the invention.

 PT cancer and diabetes mellitus.
 PS Claim 2; SEQ ID NO 285; 152bp; Japanese.
 XX The invention relates to a novel probe set for the identification of a
 CC Human Leukocyte Antigen (HLA)-B allele in a sample. The invention further
 CC includes a method for identifying an HLA-B allele using the probe set.
 CC The probe set and method are useful for identifying an HLA-B allele in a
 CC sample. The information gained is useful, for example, in matching organ
 CC donors and recipients, and in guiding clinical decisions in the treatment
 CC of diseases such as cancer and diabetes mellitus. This oligo sequence
 CC represents a probe used in the identification of a Human Leukocyte
 CC Antigen B allele of the invention.

 PT Enhancing hematopoiesis-supporting ability of immortalized human bone-
 PT marrow stroma cells comprises transferring Indian hedgehog gene via
 XX retrovirus vector, for use in regeneration medicine.
 XX
 PS Disclosure; Page 10; 42pp; Japanese.
 XX
 CC The invention relates to a method for the proliferation of hematopoietic
 CC cells, which comprises expressing a polypeptide with use of a gene that
 CC encodes a polypeptide with the proliferative activity of hematopoietic
 CC cells selected from e.g. a polypeptide of sequence (I) with 202 amino
 CC acids ABA04765, a polypeptide containing at least 28-202 amino acid
 CC residues in the sequence (I) and a polypeptide derived from the sequence
 CC (I). Also included are: a similar method for the proliferation of
 CC hematopoietic cells by expressing a gene that contains a DNA chosen from
 CC (a) a DNA with a sequence of (II) of 609 base pairs ABA04766, (b) a DNA
 CC containing at least 81-606 base pairs in the sequence (II) and (c) a DNA
 CC hybridizable with any of the DNAs in (a) and (b) under stringent
 CC conditions and encoding a protein with Indian hedgehog activity; bone-
 CC marrow stroma cells transferred with the gene that encodes such
 CC polypeptide with proliferative activity on hematopoietic cells; a method
 CC for proliferating hematopoietic cells by co-culturing such bone-marrow
 CC stroma cells with hematopoietic cells; an expression vector for enhancing
 CC the hematopoiesis comprising a gene the encodes the already-specified
 CC polypeptide; and enhancement agents for hematopoietic cells containing
 CC the already-specified polypeptides as active ingredient. The bone-marrow
 CC stroma cells are particularly those previously with hTERT (human
 CC telomerase catalytic domain) gene transferred, and also with a gene that
 CC encodes a polypeptide with proliferative activity on hematopoietic cells
 CC transferred by using a retrovirus vector. The produced bone-marrow stroma
 CC cells are for use in regeneration medicine, e.g. bone-marrow transplant
 CC and tissue regeneration particularly of blood vessels, heart muscle and
 CC liver. With this method, the hematopoiesis-supporting ability of
 CC immortalized human bone-marrow stroma cells is greatly enhanced, and
 CC hematopoietic stroma cells are strongly amplified when the 1hh (Indian
 CC hedgehog) stroma cells are used. The hTERT stroma cell line (1hh stroma
 CC cell line) was established with use of a PRX-ZRS-hGFP vector for
 CC transferring an Indian hedgehog gene before overexpressing such gene. The
 CC present sequence represents a PCR primer used to amplify the Indian
 CC hedgehog (1hh) gene.

 CC antigen-specific chimeric primers and a detectably labeled universal
 CC primer. Also included are a kit (I) for genotyping blood cell antigens by
 CC (M1) (comprising a pair of blood cell antigen-specific chimeric primers
 CC for each blood cell antigen to be genotyped and a detectably labeled
 CC universal primer, preferably a pair of detectably labeled universal
 CC primers), a set of blood cell antigen-specific chimeric primer pairs
 CC useful in a multiplex PCR (comprising at least two, preferably
 CC substantially all of chimeric primers) and a set of blood cell antigen
 CC allele-specific oligonucleotide probes useful for genotyping blood cell
 CC antigens. (M1) enables genotyping of large number of blood cell antigens
 CC and is a practical, rapid and reliable method for analyzing the
 CC hybridization results to assign the clinically relevant blood cell
 CC antigen genotypes. The present sequence is a blood group antigen specific
 CC probe useful in the method of the invention.

XX
XX
PS Claim 1; SEQ ID NO 187; 88pp; German.

CC This invention describes novel oligonucleotides used in a method for
CC detecting beer-spoilage bacteria in a sample. The bacteria detected
CC include lactic acid bacteria of the genera Lactobacillus or Pedococcus,
CC especially the species L. coryniformis, L. perolens, L. buchneri, L.
CC plantarum, L. fructivorans, L. lindneri, L. casei, L. brevis or P.
CC damnosus or Gram-negative bacteria of the genera Pectinatus and M.
CC Megaspilaeta, specifically P. trisingensis, P. cerevisiophilus and M.
CC cerevisiae. The oligonucleotides of the invention provide rapid detection
CC of spoilage bacteria (typically within 48 hours, compared with 7-12 days
CC for conventional culture methods), can detect all relevant bacteria in
CC parallel, can differentiate between species of the same genus, and are
CC easy to use. ADE14806-ADE15247 represent the oligonucleotides used in the
CC method of the invention.

XX Specific detection of Hepatitis B virus (HBV) covalently closed circular
PT (ccc) DNA from liver cell biopsies by real-time PCR, useful for guiding
PT long-term anti-HBV therapy.
XX
XX
XX Claim 9; SEQ ID NO 2; 17pp; English.

CC The present invention relates to a method for detecting Hepatitis B virus
CC (HBV) covalently closed circular (ccc) DNA. The method comprises
CC obtaining a sample of liver cells infected with HBV cccDNA virus from a
CC patient, preparing at least one primer for applying to at least one end
CC of the HBV cccDNA virus, amplifying the HBV cccDNA virus by PCR using at
CC least one primer, preparing at least one probe for applying to the HBV
CC cccDNA virus genome, where the probe comprises a dye and a dye quencher,
CC and conducting a second PCR to bind at least one primer to at least one
CC probe so that the dye and the dye quencher in the probe are separated
CC allowing the HBV cccDNA virus to be detected through the dye. Also
CC disclosed is a kit for the detection of HBV cccDNA in a patient. The
CC method of the invention is useful for detecting cccDNA of HBV in the form
CC of a HBV cccDNA genome from an infected liver cell and for providing
CC guidance to the patient undergoing long term anti-HBV therapy. The method
CC is efficient, rapid, economical and highly sensitive in monitoring HBV
CC cccDNA in infected human liver biopsies. The method is specific for HBV
CC cccDNA as viral genomic DNA is not amplified. The persistence of HBV
CC cccDNA is believed to be the major reason for relapse after HBV antiviral
CC therapy, but prior art methods are poor at quantifying cccDNA in infected
CC liver cells. The present sequence represents a PCR primer used in the
CC method of the invention.

XX Disclosure; SEQ ID NO 1123; 122pp; English.
XX
XX The invention relates to an enzymatic nucleic acid molecule that
CC specifically cleaves RNA derived from hepatitis B virus (HBV) and
CC comprising one or more binding arms, without requiring the presence of a
CC 2'-OH group within the molecule for activity. The nucleic acids are
CC useful for treating hepatitis B virus infection, hepatitis,
CC hepatocellular carcinoma, cirrhosis and liver failure, either alone or in
CC combination with other therapies such as lamivudine and interferons. The
CC nucleic acids are useful as diagnostic tools to examine genetic drift and
CC mutations within diseased cells, for detecting the presence of HBV RNA in
CC a cell, for the study of RNA and for down-regulating gene expression of
CC target genes in bacterial, fungal, viral, plant or mammalian cells. This
CC sequence represents an HBV RNA target sequence, used in the scope of the
CC invention. Note: The sequence data for this patent is also available in
CC electronic format from USPTO at seqdata.uspto.gov/sequence.html.

PT arthritis (RA), useful in identification of individuals at risk of
PT developing RA or other autoimmune disease, and in development of
PT therapeutic agents.

PS Claim 21; SEQ ID NO 49888; 141pp; English.

The invention relates to an isolated nucleic acid molecule comprising a least 8 contiguous nucleotides where one of the nucleotides is a single nucleotide polymorphism (SNP) selected from any one of the nucleotide sequences of SEQ ID Nos:1-669 and 1333-49582, or their complements. The SNPs are useful as targets for the design of diagnostic reagents and the development of therapeutic agents, as well as for disease association and linkage analysis. In particular, the SNPs are useful for identifying an individual who is at an increased or decreased risk for developing an autoimmune disease such as Rheumatoid arthritis, type 1 diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory bowel diseases, psoriasis, thyroiditis, celiac disease, pernicious anaemia, asthma, vitiligo, glomerulonephritis, Graves' disease, myocarditis, Sjogren disease, or primary systemic vasculitis. Methods associated with the SNPs are useful for early detection of the disease, for providing clinically important information for the prevention and/or treatment of the autoimmune diseases particularly rheumatoid arthritis, and for screening and selecting therapeutic agents. The SNPs are useful for human identification applications. The genes containing the SNPs are useful for treating the diseases defined above. The nucleic acid molecules are useful as hybridization probes for genotyping SNPs in messenger RNA, cDNA, genomic DNA, and genomic clones. The nucleic acid molecules are useful for constructing host cells expressing a part or all of the nucleic acid molecules and variant peptides for constructing transgenic animals, for assaying or screening drugs that modulate nucleic acid expression, or for gene therapy in patients whose cells have aberrant gene expression. This sequence corresponds to a PCR primer which hybridises to the nucleic acids of the invention to amplify the SNP containing region. (Note: SEQ ID Nos 1-49582 are claimed and stated as being provided in the specification, however these sequences are not provided in the printed specification).

PT Preparing a DNA molecule by incorporating a nucleic acid molecule into at
PT least some of the DNA molecules digested with a methylation-sensitive
PT restriction enzyme and amplifying the first modified DNA molecules.

PS Disclosure; SEQ ID NO 72; 222pp; English

The invention relates to a method for preparing a DNA molecule. The method comprises: (a) providing a DNA molecule; (b) digesting the DNA molecule with a methylation-sensitive restriction enzyme and, optionally, an additional nuclease, to provide digested DNA molecules; (c) incorporating a nucleic acid molecule into at least some of the digested DNA molecules to provide first modified DNA molecules by (1) incorporating at least one primer from primers, the primers comprising a 5' constant sequence and a 3' variable sequence that is substantially non-self-complementary and substantially non-complementary to other primers; or (2) incorporating an oligonucleotide comprising an inverted repeat and a loop, under conditions where the oligonucleotide becomes blunt-end ligated to one strand of the molecule, thereby producing an oligonucleotide-linked molecule comprising a nick having a 3' hydroxyl group; (d) polymerization of the oligonucleotide-linked molecule from the 3' hydroxyl group of at least part of the oligonucleotide-linked molecule; and (e) amplifying one or more of the first modified DNA molecules to provide amplified first modified DNA molecules. The method is useful in preparing a DNA molecule for diagnosing or prognosing cancer. The method of the invention reduces the quantity of DNA required for methylation analysis from non-invasive clinical sources, e.g., serum, plasma or urine, since a majority of the DNA may remain in an unamplified form. The present sequence represents a human marker used for methylation analysis by quantitative real-time PCR, which is used in an example from the present invention.

PTD	New small interfering polynucleotide that modulates protein tyrosine phosphatase (PPP)IB polypeptide signal transduction, useful for treating disorders associated with altered PPPB signal transduction, e.g., diabetes or cancer.	
PS	Example 3; SEQ ID NO 126; 234pp; English.	
PXS	The invention relates to a novel isolated small interfering RNA (siRNA)	
CC	polynucleotide, comprising at least one nucleotide sequence from any of	
CC	the 20 fully defined sequences given in the specification. The invention	
CC	further relates to: a pharmaceutical composition comprising a new siRNA	
CC	polynucleotide and a physiological carrier; a recombinant nucleic acid	
CC	construct, comprising a polynucleotide that is capable of directing	
CC	transcription of an siRNA; a host cell transformed or transfected with	
CC	the above recombinant nucleic acid construct; a method for interfering	
CC	with expression of a protein tyrosine phosphatase (PPP)IB polypeptide,	
CC	its variant; a method for identifying a component of a PPPB signal	
CC	transduction pathway; a method for modulating an insulin receptor protein	
CC	phosphorylation state in a cell; a method for altering a Jak2 protein	
CC	phosphorylation state in a cell; and a method for creating a Jak2-	
CC	associated disorder. The siRNA has the following activities:	
CC	anti-diabetic, anorectic, anti-inflammatory, neuroprotective, cytosstatic,	
CC	immunosuppressive, and antimicrobial. The novel siRNA polynucleotides can	
CC	be used in gene therapy to treat disorders. The composition and methods	
CC	are useful in treating disorders associated with PTPB-mediated signal	
CC	transduction, such as diabetes, obesity, hyperglycemia-induced	
CC	apoptosis, inflammation, neurodegenerative disorders, cancer, autoimmune	
CC	diseases or infection. This polynucleotide sequence represents an siRNA	
CC	used for modulating the signal transduction of a protein tyrosine	
CC	phosphatase of the invention.

PT	New short interfering nucleic acid molecule that directs cleavage of a
PT	cholinergic receptor muscarinic 3 RNA, useful for treating or preventing
PT	respiratory and pulmonary diseases, e.g. chronic obstructive pulmonary
PT	disease.
XX	
PS	Claim 33; SEQ ID NO 245; 184bp; English.
CC	The invention relates to a chemically synthesized double stranded short
CC	interfering nucleic acid (sin) molecule that directs cleavage of a
CC	cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
CC	(RNAi). The sinA molecule, compounds, compositions, and methods are
CC	useful for treating or preventing respiratory and pulmonary diseases,
CC	disorders, and/or conditions, including chronic obstructive pulmonary
CC	disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
CC	cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
CC	present sequence represents a cholinergic receptor muscarinic 3 sRNA.

XX
XX New short interfering nucleic acid molecule that directs cleavage of a
PT cholinergic receptor muscarinic 3 RNA, useful for treating or preventing
PT respiratory and pulmonary diseases, e.g. chronic obstructive pulmonary
PT disease.
XX
XX Claim 33; SEQ ID NO 284; 184pp; English.
PS
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
CC (RNAi). The siNA molecule, compounds, compositions, and methods are
CC useful for treating or preventing respiratory and pulmonary diseases,
CC disorders, and/or conditions, including chronic obstructive pulmonary
CC disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
CC cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
CC present sequence represents a cholinergic receptor muscarinic 3 siRNA.

XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
CC (RNAi). The siNA molecule, compounds, compositions, and methods are
CC useful for treating or preventing respiratory and pulmonary diseases,
CC disorders, and/or conditions, including chronic obstructive pulmonary
CC disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
CC cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
CC present sequence represents a cholinergic receptor muscarinic 3 siRNA.

PT RNA through RNA interference, useful for treating asthma.
XX
XX Disclosure; SEQ ID NO 278; 84pp; English.
PS
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siRNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

PT RNA through RNA interference, useful for treating asthma.
XX
PS Disclosure; SEQ ID NO 230; 84pp; English.
XX
CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC

CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

XX
XX Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
XX disclosure; SEQ ID NO 275; 84pp; English.
PS
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance

CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

XX WPI; 2006-047555/05.

XX Identifying genetic profile associated with a neurological, psychiatric,

XX or psychological condition, comprises screening individuals for a

XX polymorphism in a genetic locus comprising the dopamine receptor D2

XX (DRD2) gene.

XX Claim 31; SEQ ID NO 1422; 634pp; English.

XX The invention relates to a method of identifying a genetic profile

XX associated with a neurological, psychiatric or psychological condition,

XX phenotype or state including a sub-threshold neurological, psychiatric or

XX psychological condition, phenotype or state in an individual, comprising

XX screening individuals for a polymorphism in a genetic locus comprising

XX the dopamine receptor D2 (DRD2) gene. The invention also relates to a

XX genetic mutation providing a genetic marker for a neurological,

XX psychiatric, or psychological condition, state or phenotype in an

XX individual, where the presence of a 957C polymorphism is indicative of a

XX predisposition to developing a neurological, psychiatric or psychological

XX condition, phenotype or state. The compositions and methods are useful

CC for identifying a genetic profile associated with a neurological,

CC psychiatric or psychological condition. The method enables clinicians to

CC make a genetic-based diagnosis of a neurological, psychiatric or

CC psychological condition and can thereby implement treatment or

CC preventative or symptom-ameliorating protocols to reduce the adverse

CC consequences of the condition. This sequence represents a human dopamine

CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the

CC invention.

XX New oligonucleotide primers for diagnosis of genetic diseases and traits

XX in dogs - amplify specific regions of the genome containing

XX microsatellite repeats, especially for diagnosing copper toxicosis and

XX carriers.

XX Claim 1; Page 18; 40pp; English.

XX This invention relates to novel oligonucleotide PCR primers which may be

XX used to identify markers associated with genetic diseases and traits in

XX dogs, in particular to diagnose genetic diseases that are not

XX phenotypically visible and to identify carriers of recessive diseases. A

XX specific application is diagnosis of copper toxicosis (CT). The invention

XX can also be used to create a genetic map of the canine genome; to

XX generate breed-specific profiles; to establish paternity and to identify

XX dogs from DNA fingerprints. The method provides rapid analysis of the

XX target sequences from only a small sample of DNA. Diagnosis can be done

XX at any time in the dog's life. The present sequence is that of a PCR

XX primer of the invention.

XX Diagnosing Sjogren's syndrome in subject, involves obtaining biological

PT sample from subject and analyzing sample of presence of antibody that

PT specifically binds membrane-associated anti-type-3 muscarinic

PT acetylcholine receptor.

XX Example 1; SEQ ID NO 2; 23pp; English.

XX The invention relates to a method for diagnosing (M1) Sjogren's syndrome

CC in a subject. The method involves obtaining a biological sample from the

CC subject, analyzing the sample for the presence of an antibody that

CC specifically binds a membrane-associated anti-type-3 muscarinic

CC acetylcholine receptor (M3R), where the presence of the antibody in the

CC sample indicates that the subject has Sjogren's syndrome. The method is

CC useful for diagnosing Sjogren's syndrome in a subject by detecting anti-

CC M3R antibodies in a biological sample, where the biological sample is a

CC fluid chosen from blood, blood serum, saliva, tears, mucus and ascites

CC fluid. The current sequence represents a primer for the RT-PCR of M3R

CC cDNA.

XX Novel isolated polypeptide comprising variant form of mouse or human SACL

PT polypeptide, and is associated with altered preference for carbohydrates

PT or other sweeteners, useful for preventing obesity, diabetes, alcoholism.

XX Claim 14; Page 86; 23pp; English.

XX The invention relates to an isolated polypeptide, comprising a variant

CC form of mouse or human SACL polypeptide. The variant form is associated

CC with altered preference for carbohydrates, other sweeteners or ethanol.

CC The polypeptide and its associated DNA sequence can be produced by

CC recombinant techniques and is useful for preventing obesity, diabetes or

CC alcoholism associated with SACL expression. The sequences are useful in

CC screening for drugs and sweeteners. Recombinant cell lines and transgenic

CC embryos may be used in screening for and identifying agents that induce

CC or repress function of SACL. Predisposition to diabetes, obesity or

CC alcoholism can be ascertained by testing any fluid or tissue of a human

CC (such as blood, pancreas or tongue) for sequence variations of the SACL

CC gene. A sequence variation of the SACL locus may indicate a

CC predisposition to diabetes, obesity and/or alcoholism and may provide a

CC diagnostic mark. The polynucleotide can be detected in a biological

CC sample by contacting the DNA with a probe to form a hybridization complex

CC which is then detected. The sequences represent cDNA encoding human and

CC mouse SACL polypeptides and PCR primers specific for the SACL genes

PS	Example 12; SEQ ID NO 364; 148bp; English.
XX	
CC	The invention relates to SACL polypeptides and the polynucleotides
CC	encoding them. The polynucleotides contain a variation associated with
CC	sensing carbohydrates, other sweeteners or ethanol. The invention also
CC	relates to a method for analysing a biomolecule in a biological sample,
CC	comprising altering SACL activity in the sample and measuring the
CC	activity, a method for analysing a polynucleotide in a biological sample,
CC	comprising contacting a polynucleotide in a biological sample with a
CC	probe where the probe hybridises to a SACL polynucleotide to form a
CC	hybridisation complex and detecting the hybridisation complex, a method
CC	of identifying susceptibility to obesity or diabetes comprising comparing
CC	the nucleotide sequence of the suspected SACL allele with a wild type
CC	nucleotide sequence, where the difference between the suspected allele
CC	and the wild-type sequence identifies a sequence variation of the SACL
CC	nucleotide sequence, and a method of treating or preventing obesity,
CC	diabetes or alcoholism associated with expression of SACL, comprising
CC	administering to a subject a pharmaceutical composition and a transgenic
CC	animal that carries an altered SACL allele. The methods and compositions
CC	of the invention are useful for screening drugs for inhibition or
CC	restoration of gene function as antidiabetic, antioesity or antialcohol
CC	consumption therapies and for identifying sweeteners and alcohols. This
CC	sequence represents a PCR primer used to amplify murine SACL DNA of the
CC	invention.

PT Isolated cadherin-like asymmetry protein-2 polynucleotide and polypeptide used to diagnose, treat and prevent autoimmune diseases and inflammatory responses.

PS Disclosure; Page 40; 286pp; English.

The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, anti-inflammatory, antiarthritic, cytostatic, hypotensive, antineumatic, antianaemic, haemostatic and neuroprotective activities. CLASP-2 can be used to inhibit an immune response in a subject by interfering with the ability of a CLASP-2 protein to bind to another T cell or B cell. An immune response in a subject may also be inhibited by administering an antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of Th1 cells. They can also be used to treat hypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory response e.g. arthritis, inflammatory bowel disease and increase differentiation and proliferation of haematopoietic cells e.g. to treat anaemia, thrombocytopenia and other blood protein disorders. Disorders

CC created by disrupting CLASP-2 function include multiple sclerosis,
 CC rheumatoid arthritis, endometriosis and pregnancy induced hypertension.
 CC The present sequence represents a human CLASP probe/primer, given in the
 CC present invention

XX Lu PS;

XX MPI; 2002-416861/44.

XX The invention relates to an isolated polypeptide (I) comprising an amino

XX acid sequence that has 90 % sequence identity to one of the human

XX cadherin-like asymmetry protein(s) (CLASP)-2 (hCLASP-2a, 2B, 2C, 2B)

XX sequences (PS). (I) is useful for identifying a compound or agent that

XX binds CLASP-2 polypeptide. An antibody (II) to (I) is useful for

XX detecting a nucleic acid encoding (I), or (II) is useful for preventing

XX inhibiting an immune response in a subject. A pharmaceutical composition

XX comprising a nucleic acid encoding (I), or (II) is useful for preventing

XX or treating a CLASP-2 mediated disease e.g. an autoimmune disease, where

XX the autoimmune disease is caused or exacerbated by increased activity of

XX TH1 cells. CLASP-2 polynucleotides are useful as probes or primers for

XX detection or inhibition of CLASP-2 expression (e.g., antisense or

XX ribozyme-mediated inhibition), for gene knockout, etc. The CLASP-2

CC polynucleotides can express CLASP-2 polypeptides, produce anti- CLASP-

CC antibodies or are used as therapeutic polypeptides. The CLASP-2

CC polynucleotide or fragments can be used in diagnostics (e.g., as probes

CC for CLASP-2 expression), as a lymphocyte marker and for therapeutic

CC purposes. CLASP-2 polynucleotides can construct transgenic and knockout

CC animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2

CC polynucleotides can screen for CLASP-2 agonists and antagonists. CLASP-2

CC polypeptides or polynucleotides can treat deficiencies or disorders of

CC the immune system, by activating or inhibiting the activation.

CC differentiation of immune cells and can treat or detect deficiencies or

CC disorders of haematopoietic cells. CLASP-2 polypeptides or

CC polynucleotides can increase differentiation and proliferation of

CC haematopoietic cells, including the pluripotent stem cells to treat those

CC disorders associated with a decrease in certain (or many) types of

CC haematopoietic cells (e.g., immunologic deficiency syndromes including

CC blood protein disorders (e.g., agammaglobulinaemia,

CC dysgammaaglobulinaemia, ataxia telangiectasia, common variable

CC immunodeficiency, Disgeorge syndrome, lymphopenia, thrombocytopenia, or

CC haemoglobinuria). CLASP-2 polynucleotides or polypeptides can treat or

CC detect autoimmune diseases, e.g., Addison's disease, haemolytic anaemia,

CC Grave's disease, multiple sclerosis, rheumatoid arthritis, lupus,

CC endometriosis, autoimmune thyroiditis, and autoimmune pulmonary

CC inflammation. CLASP-2 can be used to treat anaphylaxis or

CC hypersensitivity to an antigenic molecule, organ rejection or graft-

CC versus-host disease (GVHD) and inflammation. ABK84922-ABK85018 represent

CC cadherin-like asymmetry protein (CLASP) coding sequences and PCR primers

 XX NOVX polypeptides and encoding polymucleotides, useful for preventing or
 PT treating NOVX-associated disorders e.g. cancer, inflammation, or
 PT Alzheimer's disease, and in chromosome mapping, tissue typing or
 PT pharmacogenomics.
 XX Example 3; Page 300; 358pp; English.
 XX The present invention relates to coding sequences for NOV proteins
 CC (ABN85378-ABN85403 and ABB98401-ABB98424). The NOV proteins and coding
 CC sequences are useful for treating or preventing NOV-associated disorders
 CC or in the manufacture of a medication for treating the disorders, such as
 CC cancer, heart disease, inflammation, autoimmune disorders, allergies,
 CC blood disorders, AIDS, diabetes, obesity, asthma, IGA nephropathy,
 CC cirrhosis, arthritis, Alzheimer's disease, infections (e.g. bacterial,
 CC viral, parasitic), stroke, muscular dystrophy, epilepsy, and other
 CC wasting disorders associated with chronic diseases. The present sequence
 CC is a PCR primer for a NOV coding sequence, which was used in an example
 CC from the invention

 PT Detection of single nucleotide polymorphisms in genomes by preparation
 PT and analysis of reduced complexity genomes, useful for genotyping,
 PT fingerprinting and determining allele frequency of SNPs.
 XX
 PS Disclosure; Page 56; 11pp; English.
 XX
 CC A method has been developed for detecting the presence or absence of a
 CC single nucleotide polymorphism (SNP) allele in a genomic sample. The
 CC method comprises preparing a reduced complexity genome (RCG) from the
 CC genomic sample and analysing the RCG for the presence or absence of a SNP
 CC allele. The method can be used to characterise a tumour, to generate a
 CC genomic pattern for an individual genome or to generate a genomic
 CC classification code for a genome. The method can be used to assess
 CC whether a subject is at risk for developing a disease or to identify a
 CC set of SNP alleles associated with a disease. The method can also be used
 CC to perform linkage analysis. AAA35944 to AAA35947 represent sequences

 PT Isolated nucleic acid molecules having polymorphisms in known human genes
 PT e.g. cytochrome P450 and cathepsin S useful as genetic linkage markers
 PT for locating, identifying and characterizing the genes responsible for
 PT disorder-related traits.
 XX
 PS Example 14; Page 125; 714pp; English.
 XX
 CC This invention relates to the sequence of an isolated nucleic acid
 CC molecule comprising at least one base variation from that of a known
 CC human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2),
 CC cytochrome P450 02B1 (CYP45002B1), adrenergic receptor beta1 (ADBR1),
 CC aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
 CC (ARNT), cathepsin S (CTSS), cyclooxgenase 2 (COX2), diazepam binding
 CC inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating
 CC protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
 CC transferase (HNMT), (Kallikrein 2) KLK2, nicotinamide -N-methyl
 CC transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2),
 CC sulfoltransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4
 CC (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
 CC transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1
 CC (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
 CC (MRP3), orphan nuclear receptor (NR112), or acetylcholine muscarinic
 CC receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
 CC The polymorphisms in the human genes cited in the invention are useful as
 CC genetic linkage markers for locating and characterizing the genes that
 CC are responsible for specific traits within the genome and eventually
 CC identifying the genes responsible for a variety of disorder-related
 CC traits as a result of their e.g., overexpression, constitutive
 CC expression, mutation or underexpression, which may be used in diagnosing
 CC and/or treating the disorders. The nucleic acid molecules comprising the
 CC polymorphic sequences contained in CYP4501A1, CYP4501A2, CYP4502B1,
 CC ARNT, EPHX2, GST12, NNMT, NQO2, NR112, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
 CC MDR1 and/or MDR3 are useful for screening individuals for altered drug
 CC metabolism. The polymorphic sequences contained in CYP4501A1, CYP4501A2,
 CC AHR, MDR1 and/or MDR3 may also be used to screen individuals for
 CC susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
 CC used to screen for altered cardiovascular function, in COX2 for altered
 CC susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
 CC nervous system function, in FLAP and HNMT for altered pulmonary,
 CC immunological or haematological function, in KLK2 for altered serine
 CC protease activity in the prostate, in LTF for altered immunological or
 CC haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
 CC peripheral nervous system function. The present sequence represents a PCR
 CC primer used to amplify the sequences of the invention

PT New radiation hybrid map of the dog, Canine familiaris, genome, useful
 for e.g. identifying genes implicated in phenotypic and behavioral traits
 or in genetic diseases and for studying dog pedigrees.

PS Claim 1; Page 73; 87pp; English.

CC The present invention describes a radiation hybrid map of the dog (Canine
 CC familiaris) genome comprising the genome location of a marker selected
 CC from AAA66139 to AAA66942. The radiation hybrid map is useful for
 CC identifying and localising dog genes, since it covers approximately 80 %
 CC of the dog genome and provides a dense map integrating different types
 CC (i.e. Type I and Type II) of markers. The map and the dog genome markers
 CC (or complementary sequences) are especially useful to identify genes
 CC responsible for phenotypic and behavioural traits in dogs, to identify
 CC morbid genes, to analyse diseases and identify implicated genes in such
 CC diseases and their alleles, and to study dog pedigrees. They may also be
 CC useful for isolating corresponding human gene sequences e.g. genes
 CC involved in genetic diseases

XX New antisense oligonucleotides targeted to nucleic acids encoding Dual
XX specific phosphatase 9, useful for treating diseases associated with Dual
XX specific phosphatase 9, e.g. cancer, and for diagnostic and research
XX applications.
XX
XX Claim 3; Page 74; 94pp; English.
XX
XX The present invention describes a compound (1) that is 8-50 nucleobases
XX in length targeted to a nucleic acid molecule encoding Dual specific
XX phosphatase 9, and which specifically hybridizes with and inhibits the
XX expression of Dual specific phosphatase 9, or which specifically
XX hybridizes with at least an 8-nucleobase portion of an active site on a
XX nucleic acid molecule encoding Dual specific phosphatase 9. (1) has
XX antiinflammatory, cytosstatic and antibacterial activities, and can be
XX used in antisense therapy. The antisense compounds are useful for
XX modulating the expression of Dual specific phosphatase 9 and for treating
XX diseases or conditions associated with expression of Dual specific
XX phosphatase 9, e.g. hyperproliferative disorders, developmental disorders
XX or inflammatory disorders. The antisense compounds are also useful for
XX diagnostics, therapeutics, prophylaxis, e.g. to prevent or delay
XX infection, inflammation or tumor formation, as research reagents and
XX kits, and in distinguishing between functions of various members of a
XX biological pathway. The present sequence represents a human Dual specific
XX phosphatase 9 antisense phosphorothioate oligonucleotide, which is used
XX in an example from the present invention

XX PT or psychological condition, comprises screening individuals for a
XX PT polymorphism in a genetic locus comprising the dopamine receptor D2
XX PT (DRD2) gene.
XX PS Claim 31; SEQ ID NO 1424; 634bp; English.
XX XX
XX CC The invention relates to a method of identifying a genetic profile
XX CC associated with a neurological, psychiatric or psychological condition,
XX CC phenotype or state including a sub-threshold neurological, psychiatric or
XX CC psychological condition, phenotype or state in an individual, comprising
XX CC screening individuals for a polymorphism in a genetic locus comprising
XX CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a
XX CC genetic mutation providing a genetic marker for a neurological,
XX CC psychiatric, or psychological condition, state or phenotype in an
XX CC individual, where the presence of a 957C polymorphism is indicative of a
XX CC predisposition to developing a neurological, psychiatric or psychological
XX CC condition, phenotype or state. The compositions and methods are useful
XX CC for identifying a genetic profile associated with a neurological,
XX CC psychiatric or psychological condition. The method enables clinicians to
XX CC make a genetic-based diagnosis of a neurological, psychiatric or
XX CC psychological condition and can thereby implement treatment or
XX CC preventative or symptom-ameliorating protocols to reduce the adverse
XX CC consequences of the condition. This sequence represents a human dopamine
XX CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the
XX CC invention.

XX
XX DR Apoptosis inducing agent of cancer cell useful as anticancer agent,
XX PT comprises compound that suppresses expression of RecQ DNA helicase-family
XX PT gene/function of protein encoded by RecQ DNA helicase-family gene, as
XX PT active ingredient.
XX
XX Claim 10; SEQ ID NO 46; 262pp; Japanese.
XX
XX This invention describes a novel anticancer apoptosis inducing agent
XX which comprises (a) compound, which suppresses the expression of RecQ DNA
XX helicase-family gene, (b) DNA which expresses the double-stranded RNA
XX with RNA interfering (RNAi) effect with respect to RecQ DNA helicase-
XX family gene, or (c) a compound, which suppresses the function of protein
XX encoded by RecQ DNA helicase-family gene, as an active ingredient. The
XX invention also describes a method for screening for a candidate compound
XX with a protein encoded by RecQ DNA helicase-family gene. A compound,
XX which suppresses the expression of RecQ DNA helicase-family gene is a
XX transcription product or antisense nucleic acid of one part of RecQ DNA
XX helicase-family gene, or a nucleic acid which has ribozyme activity which
XX cleaves the transcription product of RecQ DNA helicase-family gene
XX specifically. It can also be a RecQ DNA helicase-family protein variant
XX which has dominant negative character with respect to the protein encoded
XX by RecQ DNA helicase-family gene, an antibody or a low molecular compound
XX coupled with the protein encoded by RecQ DNA helicase-family gene. The
XX RecQ DNA helicase-family gene is a WRN gene, BLM gene or RecQ1 gene. The
XX method of the invention is useful for manufacturing an anticancer agent
XX as a pharmaceutical composition. The novel agent is highly safe,
XX effective and does not cause any side effects when used as a
XX pharmaceutical. The products of the invention have cytostatic activity.
XX This sequence represents a double stranded siRNA (small interfering RNA)
XX molecule which is targeted to the RecQ1 gene.

XX
XX PT New pharmaceutical composition comprising a polypeptide encoded by a gene
XX PT that is differentially expressed in a pre-symptomatic lupus-affected or -
XX PT predisposed tissues, and a carrier, useful for treating lupus.
XX
XX Claim 17; SEQ ID NO 10266; 86pp; English.
XX
XX The invention relates to a pharmaceutical composition comprising a
XX carrier and at least one active component selected from a polypeptide
XX encoded by a gene that is differentially expressed in pre-symptomatic
XX lupus-affected or lupus-predisposed tissues as compared to disease-free
XX tissues, a variant of the polypeptide and a polynucleotide encoding the
XX polypeptide or variant. The invention also relates to detecting an
XX expression profile of at least one gene in a biological sample of a
XX subject and comparing the expression profile to a reference expression
XX profile of the gene to detect or monitor an autoimmune disease in a
XX subject, where the gene is differentially expressed in pre-symptomatic
XX lupus-affected or lupus-predisposed tissues as compared to disease-free
XX tissues, administering a therapeutically or prophylactically effective
XX amount of the pharmaceutical composition in a subject, preferably a human
XX who has or is predisposed to systemic lupus erythematosus or lupus
XX nephritis, contacting an agent with lupus-affected or lupus-predisposed
XX cells and comparing expression profiles or protein activities of at least
XX one gene in the cells before and after the contacting to determine if the
XX agent modulates expression or protein activity of at least one gene,
XX administering an agent to a lupus-affected or lupus-predisposed subject
XX and comparing expression profiles or protein activities of at least one
XX gene in the biological sample before and after the administering to
XX determine if the agent modulates expression or protein activity of at
XX least one gene in the subject, where the gene is differentially expressed
XX in lupus-affected or lupus-predisposed kidney tissues as compared to
XX disease-free kidney tissues. The pharmaceutical composition is useful for
XX diagnosing, treating and preventing autoimmune diseases such as lupus
XX nephritis and systemic lupus erythematosus. This sequence represents a
XX human lupus-related siRNA antisense strand of the invention. Note: The
XX sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences.

PT New pharmaceutical composition comprising a polypeptide encoded by a gene
PT that is differentially expressed in a pre-symptomatic lupus-affected or -
PT predisposed tissues, and a carrier, useful for treating lupus.
XX
PS Claim 17; SEQ ID NO 8032; 86pp; English.
XX
XX
CC The invention relates to a pharmaceutical composition comprising a
CC carrier and at least one active component selected from a polypeptide
CC encoded by a gene that is differentially expressed in pre-symptomatic
CC lupus-affected or lupus-predisposed tissues as compared to disease-free
CC tissues, a variant of the polypeptide and a polynucleotide encoding the
CC polypeptide or variant. The invention also relates to detecting an
CC expression profile of at least one gene in a biological sample of a
CC subject and comparing the expression profile to a reference expression
CC profile of the gene to detect or monitor an autoimmune disease in a
CC subject, where the gene is differentially expressed in pre-symptomatic
CC lupus-affected or lupus-predisposed tissues as compared to disease-free
CC tissues, administering a therapeutically or prophylactically effective
CC amount of the pharmaceutical composition in a subject, preferably a human
CC who has or is predisposed to systemic lupus erythematosus or lupus
CC nephritis, contacting an agent with lupus-affected or lupus-predisposed
CC cells and comparing expression profiles or protein activities of at least
CC one gene in the cells before and after the contacting to determine if the
CC agent modulates expression or protein activity of at least one gene,
CC administering an agent to a lupus-affected or lupus-predisposed subject
CC and comparing expression profiles or protein activities of at least one
CC gene in the biological sample before and after the administering to
CC determine if the agent modulates expression or protein activity of at
CC least one gene in the subject, where the gene is differentially expressed
CC in lupus-affected or lupus-predisposed kidney tissues as compared to
CC disease-free kidney tissues. The pharmaceutical composition is useful for
CC diagnosing, treating and preventing autoimmune diseases such as lupus
CC nephritis and systemic lupus erythematosus. This sequence represents a
CC human lupus-related siRNA target sequence of the invention. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published pct sequences.

CC for a cancer expressing clusterin. Also described are: an antisense
CC containing pharmaceutical composition (I) packaged in dosage unit form,
CC comprising an anti-clusterin antisense oligonucleotide, where the amount
CC of anti-clusterin antisense oligonucleotide in each dosage unit ranges
CC from 40-640 mg; and use of anti-clusterin antisense (II) in the
CC manufacture of a medicament for the treatment of cancer, where the
CC medicament is formulated to deliver a dosage of 40-640 mg of the
CC antisense to a patient. (M1) is useful for providing antisense therapy
CC for treatment of cancer chosen from prostate cancer, bladder cancer,
CC ovarian cancer, lung cancer (preferably non-small cell lung cancer),
CC renal cancer, melanoma, pancreatic cancer, metastases and cancer with
CC lymph node involvement, in a patient. (II) is useful in the manufacture
CC of a medicament for the treatment of cancer. This sequence represents an
CC anti-clusterin antisense oligonucleotide.

PT Medical device useful for reducing fibrotic tissue formation comprises a

PT substrate, and active agent associated with the substrate.

PS Example 2; SEQ ID NO 2; 27pp; English.

CC The present invention relates to medical device useful for reducing
CC fibrotic tissue formation. The invention also provides a method for
CC delivering an active agent to a subject. The method involves providing a
CC medical device that includes a substrate and an active agent suppresses
CC the production and/or activity of telopeptide lysyl hydroxylase (TLH)
CC enzyme in collagen-producing cells associated with the substrate. The

CC substrate comprises a polynucleotide delivery matrix (DNA encoding
CC antisense, ribozyme, siRNA molecules) that interfere with a PLOD2 gene
CC and inhibit the translation of a TLH enzyme. The present sequence is a
CC human PLOD2 gene specific antisense siRNA.

PT Reducing or preventing fibrotic tissue formation in a subject, comprises

PT delivering a polynucleotide that suppresses production and/or activity of

PT telopeptide lysyl hydroxylase enzyme.

PS Example 1; SEQ ID NO 2; 26pp; English.

CC The invention relates to a method (M1) for reducing or preventing
CC fibrotic tissue formation in a subject. (M1) comprises delivering a
CC polynucleotide that suppresses telopeptide lysyl hydroxylase (TLH) enzyme
CC production/activity in collagen-producing cells, where the polynucleotide
CC has a small interfering RNA (siRNA) molecule or DNA encoding siRNA that
CC interferes with the PLOD2 (telopeptide lysyl hydroxylase) gene and
CC inhibits TLH enzyme translation, or interferes with a gene encoding a
CC protein in production/processing of the enzyme. Also described is a kit
CC comprising components for the formation of a polynucleotide delivery
CC matrix. (M1) is useful for reducing or preventing fibrotic tissue
CC formation in subject, where the fibrotic tissue formation is associated
CC with heart rhythm disorder, heart failure, valve disease, vascular
CC disease, diabetes, neurological diseases and disorders or surgery, and

PT Novel proteins used to prevent viral infection and to identify other
 XX inhibitors.

PS Example 1; Page 57; 144pp; English.
 XX

CC Primer PPR2A8 was used in the PCR amplification of herpesvirus entry
 CC protein B (HvEB) cDNA (see also AA235084). HvEB is a novel member of the
 CC human tumour necrosis factor receptor family that mediates entry of an
 CC alphaherpesvirus (AHV) into cells. Cellular herpesvirus entry proteins
 CC (I) such as HvEB, their mutants, homologues, derivatives, variants and
 CC active fragments are claimed, as are recombinant cells (especially CHO,
 CC murine melanoma, swine testes), vectors, and anti-cellular herpesvirus
 CC protein compounds (II). Suitable (II) include antisense oligonucleotides,
 CC antibodies specific for (II), peptides and peptidomimetics. Methods of
 CC identifying (II), of inhibiting entry of an AHV into a cell using (II),
 CC and of treating an AHV infection in an animal, especially a human, using
 CC (II) are also claimed

PT Identifying genetic profile associated with a neurological, psychiatric,
 PT or psychological condition, comprises screening individuals for a
 PT polymorphism in a genetic locus comprising the dopamine receptor D2
 PT (DRD2) gene.
 XX

PS Claim 31; SEQ ID NO 1420; 634pp; English.
 XX

CC The invention relates to a method of identifying a genetic profile
 CC associated with a neurological, psychiatric or psychological condition,
 CC phenotype or state including a sub-threshold neurological, psychiatric or
 CC psychological condition, phenotype or state in an individual, comprising
 CC screening individuals for a polymorphism in a genetic locus comprising
 CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a
 CC genetic mutation providing a genetic marker for a neurological,
 CC psychiatric, or psychological condition, state or phenotype in an
 CC individual, where the presence of a 957C polymorphism is indicative of a
 CC predisposition to developing a neurological, psychiatric or psychological
 CC condition, phenotype or state. The compositions and methods are useful
 CC for identifying a genetic profile associated with a neurological,
 CC psychiatric or psychological condition. The method enables clinicians to
 CC make a genetic-based diagnosis of a neurological, psychiatric or
 CC psychological condition and can thereby implement treatment or
 CC preventative or symptom-ameliorating protocols to reduce the adverse
 CC consequences of the condition. This sequence represents a human dopamine
 CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the
 CC invention.

 XX
 XX New antisense oligonucleotides targeted to nucleic acids encoding Dual
 PT specific phosphatase 9, useful for treating diseases associated with Dual
 PT specific phosphatase 9, e.g. cancer, and for diagnostic and research
 PT applications.
 XX
 XX Claim 3; Page 74; 94pp; English.
 XX
 XX The present invention describes a compound (I) that is 8-50 nucleobases
 CC in length targeted to a nucleic acid molecule encoding Dual specific
 CC phosphatase 9, and which specifically hybridises with and inhibits the
 CC expression of Dual specific phosphatase 9, or which specifically
 CC hybridises with at least an 8-nucleobase portion of an active site on a
 CC nucleic acid molecule encoding Dual specific phosphatase 9. (I) has
 CC antiinflammatory, cytostatic and antibacterial activities, and can be
 CC used in antisense therapy. The antisense compounds are useful for
 CC modulating the expression of Dual specific phosphatase 9 and for treating
 CC diseases or conditions associated with expression of Dual specific
 CC phosphatase 9, e.g. hyperproliferative disorders, developmental disorders
 CC or inflammatory disorders. The antisense compounds are also useful for
 CC diagnostics, therapeutics, prophylaxis, e.g. to prevent or delay
 CC infection, inflammation or tumour formation, as research reagents and
 CC kits, and in distinguishing between functions of various members of a
 CC biological pathway. The present sequence represents a human Dual specific
 CC phosphatase 9 antisense phosphorothioate oligonucleotide, which is used
 CC in an example from the present invention
